

Notification of a Class 1 Closure Plan Modification

The US Department of Energy (DOE) and the Los Alamos National Laboratory are notifying the public of a Class 1 Modification to the Closure Plan for Material Disposal Area (MDA) P. MDA P is an inactive landfill located at Technical Area 16.

The Laboratory submitted a Revised Request for Class 1 Closure Plan Modification for MDA P dated May 13, 2002, and supplemental information dated May 20, 2002 to the New Mexico Environment Department (NMED). The NMED Hazardous Waste Bureau (HWB) made a determination that the document and supporting documentation are administratively complete, and approved the proposed modifications on May 30, 2002.

The approved closure plan addresses a revised closure plan schedule, changes to waste volumes generated during closure activities, correction of typographical errors, and clarification of document submittal and approval dates.

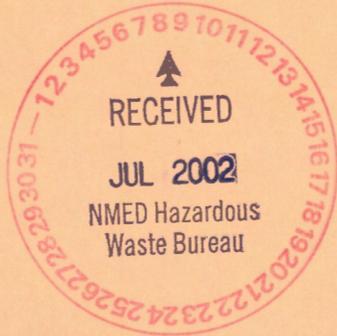

These modifications to the MDA P Closure Plan do not affect the Laboratory's ability to complete the closure in a manner that is protective of human health and the environment. Any questions regarding this Class 1 Closure Plan Modification should be directed to Carmen M. Rodriguez at (505) 665-6770, 1-800-508-4400 or Email: carmenr@lanl.gov.
