SUBJECT: FU 2 SAMPLING ACTIVITIES AT TA-18 (FORMER OU 1093)

Dear Mr. Garcia:

Field Unit 2 is planning to conduct Voluntary Corrective Activities (VCAs) at three septic tanks, Potential Release Sites (PRS) 18-003 (a, b, and c), at TA-18 on or about September 1, 1997 through approximately September 4, 1997. Activities will include excavating soil above the septic tanks to expose the top of the tanks, removing the tops, and pressure rinsing the inside of the tanks until clean. The tanks will be filled with flowcrete thereby sealing off inlet and outlet lines of the tanks and filling the remaining volume of the tank itself. The tops of the tanks will be replaced and backfilled with clean soil to the level of the surrounding terrain. Soil samples will be collected around the tank and at the inlet and outlet region of the tanks.

The New Mexico Environment Department was briefed on these VCAs in July of 1997.

Samples will be collected as shown in the table below.

Location	Number of Samples	Sample Type	Analyses
PRS 18-003(a, b, & c)	15 each	subsurface soil	SVOCs, VOCs, TAL Metals, & RAD
PRS 18-003(a, b, & c)	15 each	concrete	SVOCs, VOCs, TAL Metals, & RAD
PRS 18-003(a, b, & c)	9 each	rinsate	SVOCs, VOCs, TAL Metals, & RAD

If you have any questions or concerns, please call me at (505) 667-0819.

Sincerely,
