Subject: Additional Sampling at ~~019-001~~
19-001

Becky,

As part of LANL's response to the NOD for the Remedy Completion Report for the Investigation and Remediation of CU 19-001-99, LANL agreed to collect additional samples to determine extent of contamination. LANL proposed to collect these samples at locations 19-22608, 19-22615, and 19-22627 and analyze them for TAL metals. Samples will be collected at two 2-foot intervals (beginning at two feet below the deepest sample). If contamination is still detected above background, LANL should contact me or John Young (428-2548) before submitting the final results. Thanks.

Darlene
