

INTER-OFFICE MEMORANDUM

DATE January 10, 1947

TO: Henry R. Hoyt
FROM: John Bolton
SUBJECT: Contaminated Materials Disposal Ditch.

L.J. 1757
AREA 'A' OR 'B' ?
TA-21

1742
TA 21

The present contaminated materials disposal ditch is judged by the CMR Division maintenance engineer, J. B. Graham, to be adequate for approximately three months from date. Past experience also indicates the necessity of starting the preparation of a new ditch of that size not less than a month before actual usage. It is therefore felt necessary to start digging about March 1.

The present site is probably too small for expansion unless the south fence is moved closer to the canyon edge, or the east fence moved farther in that direction. Either of these moves would be a somewhat temporary expedient, and we suggest the assignment of a larger area permitting reasonable expansion. Perhaps east of the DP East Site.

Your attention to the problem will be appreciated.
