7#21

This is in reply to your letter to N. E. Bradbury through John Bolton dated March 27, 1964, subject Waste Disposal - DP Site. We have made a preliminary engineering study of the problem of radioactive waste disposal at DP and have evaluated the three alternatives which you suggested in your memorandum.

It has been decided by the Director's Office to postpone this project to FY 67. This will give additional time to do a more detailed engineering study and make a better evaluation of the problem.

Attached to this memo is a report prepared by L. F. Burdge, ENG-1, which gives the results of our preliminary investigation. Some time later this year we will return to this project and prepare it for submission in the FY 67 budget program.

C. R. Wherritt
