DATE: 20 September 1976

FROM : J. L. Warren, H-7

SUBJECT : DISPOSAL FACILITY ACTIVITIES

SYMBOL : H-7A-76-77

MAIL STOP: 517

Three new 1.8 m diameter by 20 m deep shafts are being dug at Area T, TA-21, for disposal of nonretrievable cement paste. These are shafts 91, 92, and 94. Digging was started 9/17 and will be complete by 9/30/76.

Concrete casks are to be emplaced into trench "C" on 9/20/76 and 9/22/76 and the trench backfilled to the "lips" of the casks by 9/24/76.

A change in our plans has resulted in Pit 22 being planned for use for Pu-waste disposal, and Pit 13 for U+FP/IA waste disposal. The eight sections of filter plenum now above ground will be put into Pit 22 on 9/20/76. These sections will not, however, be covered for several months yet until routine waste disposal activities are begun in the pit.
