SUBJECT: NMED REQUEST FOR THE STORM WATER POLLUTION PREVENTION PLAN REGARDING THE INTERIM ACTION PLAN FOR PRS 21-024(i) (FORMER OU 1106, FU 1)

Dear Dr. Dinwiddie:

Please find below the Los Alamos National Laboratory's response to the New Mexico Environment Department Hazardous and Radioactive Materials Bureau's Request for Supplemental Information (RSI) for the Storm Water Pollution Prevention (SWPP) Plan regarding the Interim Action Plan for Potential Release Site (PRS) 21-024(i).

A Site Specific Surface Water Assessment (AP 4.5) was completed in May of 1997, for PRS 21-024(i). From this assessment and other site visits, it was determined that if storm water runoff occurred from this PRS it was not discharged from a point source. As a result of this determination, the SWPP Plan for PRS 21-024(i) was administratively terminated in April 1998. As identified in the AP 4.5 assessment and Storm Water Action Team (SWAT) recommendations, the existing Best Management Practices are being maintained.

During May of 1998, the Environmental Protection Agency (EPA) Region 6 conducted a National Pollutant Discharge Elimination System (NPDES) Storm Water Inspection. Based on the inspection and subsequent discussion with EPA, the Laboratory has committed to develop a SWPP Plan(s) addressing all Solid Waste Management Units in the Laboratory's Resource Conservation and Recovery Act Operating Permit. The Laboratory is currently working on the development of this SWPP Plan and when completed it will be available for review.

TV

Please contact Mike Alexander of the Laboratory's Water Quality and Hydrology Group at 665-4752 if you have any questions concerning the Laboratory's NPDES Storm Water Program.

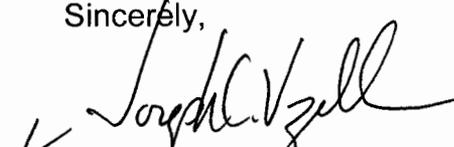

Sincerely,

Julie A. Canepa, Program Manager
Environmental Restoration
