The purpose of this e-mail is to summarize the meeting held at HWB on July 15, 2003 to discuss the Interim Action (IA) Completion Report for Solid Waste Management Unit 21-024(i) at Technical Area 21. Present at the meeting were: Becky Coel-Roebeck (LANL RRES), Paula Bertino (LANL RRES) and Vickie Maranville (NMED HWB).

NMED has conducted a preliminary review of the above referenced report. NMED will send the report to an NMED contractor to review the risk assessment.

NMED would like LANL to clarify the following:

Please provide information regarding the status of the drainline located in the vicinity of building 21-209 to the fence line located northwest of the former septic tank. Specifically, clarification on the status (removed or existing), approximate depth, and path forward for removal and sampling of the line.

Please clarify the radiological dose calculation (page 76 and 87), including the use of background dose. Please explain how a background dose is calculated.

Clarification to the above comments can be submitted to NMED via e-mail in the form of a record of communication. NMED will place a copy of this e-mail and the LANL ROC response in the NMED TA-21 administrative record. Should you have any additional questions or require further clarification, please feel free to contact me.
