OFFICE MEMORANDUM

TO : Eldon Christensen, CMB-11

DATE: August 10, 1977

FROM : Walter J. Wenzel, H-1 DP Supervisor *WJW*

SUBJECT : MONITORING AND COVERING <sup>241</sup> Am LIQUID WASTE TRANSPORT TRAILERS *Jul*

SYMBOL : H-1 DP-77-116

MAIL STOP: 336

Recently a large area beneath the transport trailer became contaminated up to  $5 \times 10^4$  cpm/100 cm<sup>2</sup>. This area will be covered with asphalt. The leak on the tank has been welded.

To avoid and contain the tank leakage the following precautions should be taken:

1. H-1 will monitor and tag the trailers immediately after filling and immediately before transport to Building 257. The trailers will also be monitored and tagged after emptying at Building 257 and tagged before being returned to Building 2.
2. The empty trailers should not be stored at Building 257; but should be returned to Building 2 as soon as possible after transfer and tagging.
3. The empty trailers should be stored on the concrete pad on the west side of Building 2 south and be protected from the weather by an enclosure.

WJW/jv
