Subject: RE: Dioxin/Furan for sample RE 21-06-68643

Mark and Roy,

Based on the data you faxed on August 16 and 17, NMED will not require additional dioxin/furan sampling at SWMU 21-024(c). NMED will evaluate the need for additional HE sampling once we have received and reviewed the HE analysis for this site.

Thanks,
Katie

Hi Kathryn,

I faxed you some additional information on the Dioxin/Furan results for sample RE 21-06-68643 taken at SWMU 21-024(c). I faxed you the detection limits for each congener and a table of the Toxicity Equivalency Factors (TEFs). I also faxed a copy of the results with the Toxicity Equivalents for each congener detected. Please let me know if you have any questions. Mark is out of the office until next Tuesday afternoon. Thanks!
