Subject: RE: Preliminary data attached for Request#5716S

Roy and Mark,

Based on the explosive compounds and dioxin/furan sampling results you provided for AOC 21-002(b), NMED will not require additional sampling for explosive compounds or dioxin/furans at this site. Additionally, based on the dioxin/furan sampling results for SWMU 21-009, NMED will not require additional dioxin/furan sampling at this site.

Let me know if you have any questions.

Thanks,
Katie

P.S. Roy-is your fax number 505-606-0864 over there? If not, could you please send that along or give me a call.

Katie,

Attached are explosive compound results for your review. The sample was collected at AOC 21-002(b). The sample was collected on August 7th, 2006, at location #1 at 2.5-3.0 feet bgs. Based on this data we are not planning on collecting further samples for explosive compounds at this site. I will be faxing a hard copy of the dioxin/furan results for this site later today.

Please call me if you have any questions. Thanks!
