INTER-OFFICE MEMORANDUM

DATE 4/12/46

TO:

FROM: H. I. Group DP East

SUBJECT: Disposal of Contaminated Oil

*monitors the*

Every three months the contaminated oil from the filter house is to be pumped into the three hundred (300) gal. tank by the plumbers. The trailer tank is then hauled to the contaminated dump by the H. I. Group members who dispose of all contaminated trash. At the contaminated dump the oil is then transferred to smaller (50 gal.) barrels by means of a drain pipe. The small barrels are then tightly sealed and cautiously rolled into the contaminated dump. Care is taken to prevent them from rolling together. The trailer is then checked and if it is contaminated it is cleaned before being returned to DP West.
