

20 April 1948

Harriet L. Hardy, M. D.

Carl Buckland

T. A. 33

The experiment of T. A. 33 went off at 12:22 P. M. on 14 April 1948, without venting the ground or any section of the filled in elevator shaft. The air and ground directly over the experiment were checked for Alpha activity. This was repeated 24 hours later and no activity could be detected in either case.
