Emergency Permit 18-001

On September 14, 2018, Los Alamos National Laboratory ("LANL") informed the New Mexico Environment Department ("NMED") that it had an emergency involving unstable hazardous waste and requested that NMED issue it an emergency permit to treat the unstable waste. LANL's Emergency Response team had determined that the unstable waste posed an imminent and significant health and safety risk and was unsafe to transport. The waste covered by this authorization was identified by e-mail from LANL on September 14, 2018.

LANL is located in Los Alamos County, an incorporated county in north-central New Mexico, and approximately 60 miles north-northeast of Albuquerque and 25 miles northwest of Santa Fe. LANL occupies approximately 40 square miles on the Pajarito Plateau. The U.S. Department of Energy (DOE) / National Nuclear Security Administration (DOE/NNSA) owns the facility, and the DOE/NNSA and Los Alamos National Security, LLC (LANL) operate the facility.

Based on information provided and after considering the inherent dangers associated with handling the unstable materials, NMED approved an emergency permit (18-001) on September 14, 2018 for LANL to treat the waste pursuant to 20.4.2.333 NMAC, incorporating 40 CFR 270.61. LANL's Emergency Response

personnel determined the safest and most appropriate method for treatment was by detonation.

The waste consisted of two 50 milliliter containers of unstable 1,3-diazide-2,2-dinitro-propane. The unstable chemical was found in a lab in Technical Area-35, Building 85.

LANL's Emergency Response team safely treated the waste by detonating the waste and implementing all necessary safety precautions the afternoon of September 14, 2018.
