Edward Horst, Program Manager
Radioactive and Hazardous Waste Bureau
State of New Mexico Environment Department
Harold Runnels Building
1190 St. Francis Drive
P. O. Box 26110
Santa Fe, New Mexico 87502

Dear Mr. Horst:

Enclosed is the final closure report and certification letters for the TA-35, TSL-85 Waste Oil Surface Impoundment at the Los Alamos National Laboratory. The field work for this interim status closure was initiated in March 1989, with verbal approval from New Mexico Environmental Improvement Division (now the New Mexico Environment Department) personnel, and completed in late 1990. Provided your staff agrees that this site has been clean-closed, no post-closure care will be necessary.

Since the original closure plan for this site was never formally approved, a modified closure plan has been included as Enclosure 1. This final version of the closure plan has been updated to reflect operations as they actually occurred in the field. Modifying the closure plan in this manner allowed for a significant reduction in the volume of the closure report (e.g., fewer variations from the closure plan had to be documented and justified).

If you have any questions concerning the closure plan, report, or certifications, please contact Steve Slaten (665-5050) of my staff or Larry Maassen (667-1691) of Environmental Restoration (EM-13).

Sincerely,

Jerry L. Bellows
for Jerry L. Bellows
Area Manager
