Ms. Michelle Hunter, Chief
Ground Water Quality Bureau
New Mexico Environment Department
Harold Runnels Building, Room N2261
1190 St. Francis Drive
P.O. Box 26110
Santa Fe, NM 87502

Dear Ms. Hunter:

Subject: Request to Operate Mechanical Evaporators, Sigma Mesa Evaporation Basins, DP-857

The U.S. Department of Energy and Los Alamos National Security, LLC (DOE/LANS) request approval from the New Mexico Environment Department (NMED) to operate five mechanical evaporators at the Sigma Mesa Evaporation Basins (SMEBs). The five SMEBs, regulated by the NMED under Discharge Permit DP-857, evaporate reverse osmosis wastewater from the Sanitary Effluent Reclamation Facility (SERF). Current evaporation rates at the five basins are marginally capable of maintaining the capacity needed for routine SERF operations. The five proposed mechanical evaporators will enhance evaporation and provide DOE/LANS with additional operational flexibility. This letter and enclosures provide technical information on the proposed mechanical evaporators and communications with the NMED Air Quality Group concerning permitting under Los Alamos National Laboratory's Title V Operating Permit.

SMI Model 120F Floating Mechanical Evaporator

DOE/LANS propose to install an SMI Model 120F floating mechanical evaporator in each of the five SMEBs. Enclosure 1 contains the SMI product sheet for the Model 120F evaporator. Each mechanical evaporator will be anchored and secured in position using diametrically placed nylon ropes anchored outside of the basin. No anchors or ties will penetrate the basin's synthetic liner system.

Spray drift will be mitigated by the programmable *SMARTH2O* system which continuously monitors wind speed and direction to control operation of the mechanical evaporator's pumps and fans at user-determined set-points. When set-point conditions are exceeded the equipment will automatically turn off; operations will resume when wind direction and speed return to allowable conditions. These set-points will be determined independently for each mechanical evaporator.

Additional project-specific specifications and operating criteria are listed below:

- ✓ **Maximum discharge per unit (gal. per minute):** 9 gpm
- ✓ **Hours of operation:** 24 hrs/day, 7 days/week
- ✓ **Months of operation:** 12
- ✓ **Ambient operating temperature:** >38°F
- ✓ **Frequency of inspections:** daily, when operating

NMED Air Quality Bureau Permitting:

On July 25, 2016, DOE/LANS submitted a permit application (Enclosure 2) to the NMED Air Quality Bureau to install five SMI Model 120F floating mechanical evaporators in the SMEBs at Los Alamos National Laboratory (LANL). The application requested a minor modification of LANL's Title V Operating Permit. Enclosure 3 contains a July 26, 2016, letter from the NMED Air Quality Bureau acknowledging receipt of the above-referenced application and a determination that the application is complete.

On August 1, 2016, Ms. Kirby Olson, NMED Air Quality Bureau, sent Mr. Bill Blankenship, Los Alamos National Security, LLC, an email (Enclosure 4) referencing Air Quality Regulation 20.2.70.404.B NMAC for Minor Permit Modifications and clarifying the regulatory requirements. In the above-referenced email Ms. Olson states the following:

> *20.2.70.404.B(6) NMAC states that changes proposed in a minor modification can be made after the application is ruled complete. The third paragraph of the completeness letter* **[Enclosure 2]** *states "Therefore, as allowed under 20.2.70.404.B(6) NMAC, the permittee shall comply with the proposed permit conditions in Enclosure 1 of the application until the Department issues the final permit modification P100R2M1." That language was intended as the authorization to operate under the proposed conditions.*

In accordance with 20.2.70.404.B(6) NMAC, once a minor modification application is ruled complete the applicant is authorized to operate under the conditions proposed in the application. The following operating conditions are listed on page 6 of the above-referenced permit application:

A. Emission Calculations

Requirement: The permittee shall comply with the facility-wide HAP emission limits at Table 106.8.
Monitoring: The permittee shall monitor hours of operation for each evaporative sprayer.
Recordkeeping: The permittee shall record hours of operation for each evaporative sprayer on a monthly basis.
Reporting: The permittee shall submit reports described in Section A109 and in accordance with Section 8110.

Please contact Karen E. Armijo by telephone at (505) 665-7314 or by email at Karen.Armijo@nnsa.doe.gov, or Robert S. Beers by telephone at (505) 667-7969 or by email at bbeers@lanl.gov, if you have questions regarding this request for NMED approval to operate five SMI Model 120F floating mechanical evaporators at the Sigma Mesa Evaporation Basins.

SMI 120F EVAPORATOR

ENCLOSURE 1
EPC-DO-16-228
LA-UR-16-25934

OVERVIEW

The SMI® 120F is a floating mechanical Evaporator, specifically designed for small ponds where the end user is concerned about controlling wet and dry particulate drift. The 120F Evaporator is simple to use, easy to maintain, and constructed from high grade materials for years of reliable operation.

BENEFITS

Low Buildup: Designed with a minimal amount of top surface area to control the build-up of residue and scale, helping to reduce clean up and maintenance!

High Performance: High-speed fan blade rotation creates an optimum water droplet distribution for evaporation. Annual evaporation rates up to 70% could be achieved and averages will typically be between 25% and 60%.*

Easy Maintenance: The machine is designed for easy cleaning and maintenance. It requires no weekly bearing lubrication, as it is lubricated for the life of the motor. Pump is fitted with a static inlet filter that can be removed for cleaning. Pump sleeve is designed with a viewing port to simplify inspecting for scale build-up and obstructions in the pump inlet.

Minimal Clogging: The SMI® 120F can pass particles up to 3/16 inch (4.7 mm) in diameter, which reduces the need for prefiltering, filter cleaning and the hassles of clogged nozzles.

Extreme Duty: This design has evolved from 20 years of experience in industrial and extreme outdoor applications. Polyethylene pontoons are filled with closed-cell polyurethane foam, ensuring buoyancy even after any accidental puncturing of the plastic outer shell. Critical components are manufactured from stainless steel for extended life in harsh environments. "Corrosion package" upgrade is available for all stainless steel construction for high and low pH applications.

FEATURES

Floating unit supported by plastic pontoons containing closed-cell PU foam.

Head adjusts at increments from 0 to 90 degrees to allow a lower plume height to reduce drift distance, and thus reduce shut-downs due to high winds.

Heavy industrial construction, including stainless steel motor enclosure, spray manifold and fan blade, increasing durability and equipment life span.

Optional vibration sensor available to shut down motor before catastrophic failure due to residue or ice build-up.

304 stainless steel submersible pump attached to floating frame with integrated static filter and viewing port for ease of maintenance and inspection.

*Evaporation rates depend on many factors including ambient temperature, relative humidity, water makeup and chemistry, wind conditions, solar radiation and site topography.

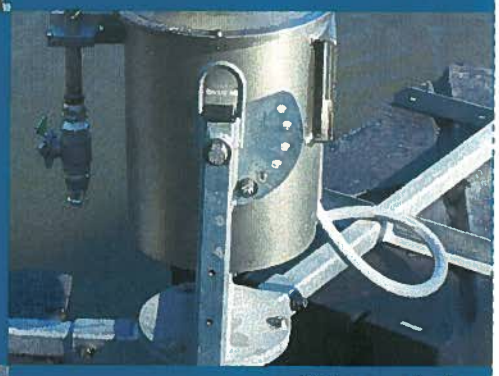
SMI 120F EVAPORATOR

ENCLOSURE 1
EPC-DO-16-228
LA-UR-16-25934

Close up of UV stabilized pontoon filled with closed cell PU Foam

Optional vibration switch to automatically shutdown the fan from scale build-up on the propeller and protect from premature motor failure from fan imbalance. Comes housed in a second enclosure to provide additional protection against water ingress.

Water shield covering junction box to provide dual protection for water ingress to electrical terminations



Indexable head for fan inclination of 0-90 degrees

Pump holder for ease of pump inspection and maintenance

SPECIFICATIONS

Fan and Head Assembly
- Stainless steel patented fan
- Stainless steel enclosure protects fan motor from water ingress and exposure to harsh waste water
- Optional vibration sensor to protect motor from propeller imbalance

Floats and Mount
- Galvanized steel frame structure assembled with stainless steel fasteners
- (3) UV stabilized pontoons filled closed cell PU foam

Water System
- 1/2 HP (0.37 kW) stainless steel submersible pump
- Pump options: 460V / 60HZ, 380-415V / 50HZ, or 575V /60HZ
- Stainless steel spray manifold with large holes to allow large particles to pass
- Ball valve to regulate flow to spray manifold for changing weather conditions on manual units; pump VFD to temperature/humidity algorithm for auto units

Electrical
- 5 HP (3.7 kW) Premium efficiency fan motor
- Fan motor rotates at 3600 RPM at 480 or 575 volts, 3 phase, 60 cycle power or 2900 RPM at 380-415 volts 50 cycle power
- Nema 4X control panel with manual, standalone or premium automated controls
- Submersible rated electrical power cord, length per customer requirements

Warranty
- 6 month warranty on any defective parts and workmanship

Options
- "Corrosion Package" for upgrading galvanized mount to all stainless steel construction for acidic or highly alkaline water applications
- Standalone Automation: local machine control and customer interface, pump VFD varies based upon temperature/humidity algorithm and wind speed / direction start-up and shutdown
- Premium Automation – local and remote machine control and customer interface, pump VFD varies based upon temperature/humidity algorithm, wind speed direction start-up and shutdown, camera to monitor equipment, SmartH2O software with Desktop PC that provides reporting, trending, alarms and remote control.
- Vibration sensor for motor shut down due to fan imbalance from deposits or scale buildup

Mr. Ted Schooley
Manager, Permit Programs
New Mexico Environment Department
Air Quality Bureau
525 Camino de los Marquez, Suite 1
Santa Fe, NM 87505-1816

Dear Mr. Schooley:

Subject: Title V Minor Modification Application – Evaporative Sprayers IDEA ID No. 856-Los Alamos National Laboratory (LANL)

Los Alamos National Laboratory submits the enclosed Title V minor modification application for review and approval. The application is for five evaporative sprayers intended for use to enhance water evaporation at existing storage basins.

The five spray evaporators are intended to reduce water volume in the existing Sigma Mesa evaporation basins. These synthetically-lined evaporation basins are located within Technical Area 60. The basins are intended for use to evaporate a specific treated waste water discharge from the LANL Sanitary Effluent Treatment Facility or SERF. The SERF facility further processes treated LANL sanitary wastewater effluent for beneficial reuse, and is intended to conserve potable water and reduce wastewater discharges to the environment. The stored treated waste water is a concentrated salt solution from reverse osmosis treatment at the SERF facility. Operation of the SERF facility is crucial in reducing water usage at LANL, achieving compliance with discharges to an NPDES outfall, and providing clean water for cooling tower use at LANL.

The evaporator model chosen is the SMI Evaporative Solutions Model 120F. This model is a floating mechanical evaporator designed for use in small ponds where control of wet or dry particulate drift can be optimized. The plume height and direction can be varied in order to adjust water droplet drift and create maximum evaporation rates. The floating design allows the device to be used on the pond surface rather than adjacent to the pond which minimizes drift onto a land surface. This evaporator type utilizes a high-

speed fan to mechanically shear the injected water into droplets which are then projected into the plume for evaporation. The evaporator is electric driven and has no fuel burning equipment associated with it. Due to the high salt or total dissolved solids (TDS) content of the pond water, potential emissions of particulate matter formed as water droplets evaporate is high without consideration of the particle size distribution which would be present. In general, the size of particles formed through evaporation is increased as either the TDS concentration or the water droplet diameter increases. The high TDS content present combined with large water droplets formed mechanically by a fan rather than a nozzle and atomizer results in only a small percentage of total particulate matter emitted being of concern and regulated as an air pollutant.

The enclosed emission calculations demonstrate maximum annual emissions from the combined five sprayers if operated every hour of the year would be 6.1 tons of PM30 (particulate matter less than 30 microns in diameter). Of that total, 0.3 tons would be PM10 and no emissions of PM2.5 are estimated to be present. Emission estimates are also included for all hazardous or toxic air pollutants detected in water sampling. No toxic air pollutant would be emitted in a quantity exceeding permit thresholds in 20.2.72 NMAC. Total hazardous air pollutant emissions are estimated to be 0.001 tons per year.

This project is necessary to reduce the amount of reverse osmosis concentrate that is being held in the evaporation basins on Sigma Mesa. Under current conditions, the volume of this concentrate is high enough to possibly limit the continued and sustainable operation of the SERF facility. Because of SERF's role in maintaining environmental compliance at an NPDES outfall, continued and uninterrupted operation of the facility is necessary. The use of mechanical evaporation to enhance natural evaporation rates in the ponds is a significant objective for ensuring adequate receiving capacity at the SERF ponds.

Enclosure 1 contains the proposed draft permit for this minor modification. 20.2.70 NMAC – Operating Permits requires the permittee to include a draft permit within a minor modification application. As stipulated by the rule, once the application is ruled complete LANL will comply with the draft permit. Enclosure 2 is the permit application using the appropriate NMED permit application forms.

The complete application is being submitted on disc as well as hard copy. Once the application is ruled complete, a copy will be sent to EPA Region 6 as required. If you have any questions or comments regarding this submittal or would like to discuss the submittal in greater detail, please contact Bill Blankenship at (505) 665-0823.

5	If Yes to question 3, has this facility been modified (see 20.2.72.7.P NMAC) or the capacity increased since 8/31/1972? √Yes □No □N/A	
6	Does this facility have a Title V operating permit (20.2.70 NMAC)? √Yes □ No	If yes, the permit No. is: **P-100-R2**
7	Has this facility been issued a No Permit Required (NPR)? √Yes □ No	If yes, the NPR No. is: **2195L,Q,S,T,U,V,X**
8	Has this facility been issued a Notice of Intent (NOI)? □ Yes √ No	If yes, the NOI No. is:
9	Does this facility have a construction permit (20.2.72/20.2.74 NMAC)? √ Yes □ No	If yes, the permit No. is: **632,634,1081,2195B,F,H,L,N,P**
10	Is this facility registered under a General permit (GCP-1, GCP-2, etc.)? √Yes □ No	If yes, the register No. is: **GCP-3-2195G**

Section 1-C: Facility Input Capacity & Production Rate – (5) Spray Evaporators

1	What is the facility's maximum input capacity, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly:	Daily:	Annually:
b	Proposed	Hourly: **2,253 gallons water pumped**	Daily: **54,069 gallons water pumped**	Annually: **19,735, 229 gallons water pumped**
2	What is the facility's maximum production rate, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly:	Daily:	Annually:

b	Proposed	Hourly: **2,253 gallons water pumped**	Daily: **54,069 gallons water pumped**	Annually: **19,735, 229 gallons water pumped**

Section 1-D: Facility Location Information

1	Section: **22**	Range: **6E**	Township: **19N**	County: **Los Alamos**	Elevation (ft): **7275**
2	UTM Zone: ☐ 12 or √13			Datum: ☐ NAD 27 √NAD 83 ☐ WGS 84	
a	UTM E (in meters, to nearest 10 meters): **382958**			UTM N (in meters, to nearest 10 meters): **3970164**	
b	**AND** Latitude (deg., min., sec.): **35.86872**			Longitude (deg., min., sec.): **106.29644**	
3	Name and zip code of nearest New Mexico town: **Los Alamos, NM**				
4	Detailed Driving Instructions from nearest NM town (attach a road map if necessary): **Enter Los Alamos National Laboratory from East Jemez Road. Turn left on Diamond Drive. Turn left at Eniwetok Drive to access Sigma Mesa and TA-60.**				
5	The facility is **1.0** (distance) miles **south** (direction) of **Los Alamos, NM** (nearest town).				
6	Status of land at facility (check one): ☐ Private ☐ Indian/Pueblo ☐ Federal BLM ☐ Federal Forest Service √ Other **Federal DOE**				
7	List all municipalities, Indian tribes, and counties within a ten (10) mile radius (20.2.72.203.B.2 NMAC) of the property on which the facility is proposed to be constructed or operated: **Los Alamos County, Sandoval County, Santa Fe County, Rio Arriba County, City of Espanola, San Ildefonso Pueblo, Santa Clara Pueblo, Jemez Pueblo, Pojoaque Pueblo, Cochiti Pueblo**				
8	**20.2.72** NMAC applications **only**: Will the property on which the facility is proposed to be constructed or operated be closer than 50 km (31 miles) to other states, Bernalillo County, or a Class I area (see www.env.nm.gov/aqb/modeling/classIareas.html)? Yes ☐ No (20.2.72.206.A.7 NMAC) If yes, list all with corresponding distances in kilometers: **N/A**				
9	Name nearest Class I area: **Bandelier Wilderness Area (the wilderness portion of Bandelier National Monument)**				
10	Shortest distance (in km) from facility boundary to the boundary of the nearest Class I area (to the nearest 10 meters): **0.0**				
11	Distance (meters) from the perimeter of the Area of Operations (AO is defined as the plant site inclusive of all disturbed lands, including mining overburden removal areas) to nearest residence, school or occupied structure: **N/A**				
12	Method(s) used to delineate the Restricted Area: **N/A** **"Restricted Area"** is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area.				
13	Does the owner/operator intend to operate this source as a portable stationary source as defined in 20.2.72.7.X NMAC? ☐ Yes √ No A portable stationary source is not a mobile source, such as an automobile, but a source that can be installed permanently at one location or that can be re-installed at various locations, such as a hot mix asphalt plant that is moved to different job sites.				
14	Will this facility operate in conjunction with other air regulated parties on the same property? √No ☐ Yes If yes, what is the name and permit number (if known) of the other facility?				

Section 1-E: Proposed Operating Schedule (The 1-E.1 & 1-E.2 operating schedules may become conditions in the permit.)

1	Facility **maximum** operating ($\frac{\text{hours}}{\text{day}}$): **24**	($\frac{\text{days}}{\text{week}}$): **7**	($\frac{\text{weeks}}{\text{year}}$): **52**	($\frac{\text{hours}}{\text{year}}$): **8760**		
2	Facility's maximum daily operating schedule (if less than 24 $\frac{\text{hours}}{\text{day}}$)? Start:	☐AM ☐PM	End:	☐AM ☐PM		
3	Month and year of anticipated start of construction: **July 2016**					
4	Month and year of anticipated construction completion: **July 2016**					
5	Month and year of anticipated startup of new or modified facility: **August 2016**					

6	Will this facility operate at this site for more than one year? √Yes ☐ No

Section 1-F: Other Facility Information

1	Are there any current Notice of Violations (NOV), compliance orders, or any other compliance or enforcement issues related to this facility? ☐ Yes √ No If yes, specify:		
a	If yes, NOV date or description of issue: N/A		NOV Tracking No:
b	Is this application in response to any issue listed in 1-F, 1 or 1a above? ☐ Yes √ No If Yes, provide the 1c & 1d info below:		
c	Document Title:	Date:	Requirement # (or page # and paragraph #):
d	Provide the required text to be inserted in this permit:		
2	Is air quality dispersion modeling or modeling waiver being submitted with this application? ☐ Yes √ No		
3	Does this facility require an "Air Toxics" permit under 20.2.72.400 NMAC & 20.2.72.502, Tables A and/or B? ☐ Yes √ No		
4	Will this facility be a source of federal Hazardous Air Pollutants (HAP)? √ Yes ☐ No		
a	If Yes, what type of source? ☐ **Major** (☐ ≥10 tpy of any single HAP **OR** ☐ ≥25 tpy of any combination of HAPS) **OR** √ **Minor** (☐ <10 tpy of any single HAP **AND** √ <25 tpy of any combination of HAPS)		
5	Is any unit exempt under 20.2.72.202.B.3 NMAC? ☐ Yes √ No		
a	If yes, include the name of company providing commercial electric power to the facility: _____ Commercial power is purchased from a commercial utility company, which specifically does not include power generated on site for the sole purpose of the user.		

Section 1-G: Streamline Application (This section applies to 20.2.72.300 NMAC Streamline applications only)

1	☐ I have filled out Section 18, "Addendum for Streamline Applications." ☐ N/A (This is not a Streamline application.)

Section 1-H: Current Title V Information - Required for all applications from TV Sources

(Title V-source required information for all applications submitted pursuant to 20.2.72 NMAC (Minor Construction Permits), or 20.2.74/20.2.79 NMAC (Major PSD/NNSR applications), and/or 20.2.70 NMAC (Title V))

1	Responsible Official (R.O.) (20.2.70.300.D.2 NMAC): **Michael T. Brandt**		Phone: **505-667-4218**
a	R.O. Title: **Associate Director, ADESH**	R.O. e-mail: **mtbrandt@lanl.gov**	
b	R. O. Address: **P.O. Box 1663, MS K491, Los Alamos, NM 87545**		
2	Alternate Responsible Official (20.2.70.300.D.2 NMAC): **Raeanna Sharp-Geiger**		Phone: **505-665-0136**
a	A. R.O. Title: **Deputy Associate Director, ADESH**	A. R.O. e-mail: **raeanna@lanl.gov**	
b	A. R. O. Address: **P.O. Box 1663, MS K491, Los Alamos, NM 87545**		
3	Company's Corporate or Partnership Relationship to any other Air Quality Permittee (List the names of any companies that have operating (20.2.70 NMAC) permits and with whom the applicant for this permit has a corporate or partnership relationship): **N/A**		
4	Name of Parent Company ("Parent Company" means the primary name of the organization that owns the company to be permitted wholly or in part.): **N/A**		
a	Address of Parent Company: **N/A**		
5	Names of Subsidiary Companies ("Subsidiary Companies" means organizations, branches, divisions or subsidiaries, which are owned, wholly or in part, by the company to be permitted.): **N/A**		
6	Telephone numbers & names of the owners' agents and site contacts familiar with plant operations: **N/A**		

7	Affected Programs to include Other States, local air pollution control programs (i.e. Bernalillo) and Indian tribes: Will the property on which the facility is proposed to be constructed or operated be closer than 80 km (50 miles) from other states, local pollution control programs, and Indian tribes and pueblos (20.2.70.402.A.2 and 20.2.70.7.B)? If yes, state which ones and provide the distances in kilometers: **Taos Pueblo (69), Picuris Pueblo (56), Jicarilla Apache (67), Ohkay Owingeh Pueblo (19), Santa Clara Pueblo (10), San Ildefonso Pueblo (5), Pojoaque Pueblo (13), Nambe Pueblo (24), Tesuque Pueblo (19), Cochiti Pueblo (13), Santa Domingo Pueblo (27), Zia Pueblo (30), San Felipe Pueblo (38), Santa Ana Pueblo (40), Jemez Pueblo (19), Sandia Pueblo (61), Laguna Pueblo (77), Bernalillo County (56).**

Section 1-I – Submittal Requirements

Each 20.2.73 NMAC (**NOI**), a 20.2.70 NMAC (**Title V**), a 20.2.72 NMAC (**NSR** minor source), or 20.2.74 NMAC (**PSD**) application package shall consist of the following:

Hard Copy Submittal Requirements:

1) One hard copy **original signed and notarized application package printed double sided 'head-to-toe'** 2-hole punched as we bind the document on top, not on the side; except Section 2 (landscape tables), which should be head-to-head. If 'head-to-toe printing' is not possible, print single sided. Please use **numbered tab separators** in the hard copy submittal(s) as this facilitates the review process. For NOI submittals only, hard copies of UA1, Tables 2A, 2D & 2F, Section 3 and the signed Certification Page are required.

2) If the application is for a minor NSR, PSD, NNSR, or Title V application, include one working hard copy for Department use. This copy does not need to be 2-hole punched. Minor NSR Technical Permit revisions (20.2.72.219.B NMAC) only need to fill out Sections 1-A, 1-B, 3, and should fill out those portions of other Section(s) relevant to the technical permit revision. TV Minor Modifications need only fill out Sections 1-A, 1-B, 1-H, 3, and those portions of other Section(s) relevant to the minor modification. NMED may require additional portions of the application to be submitted, as needed.

3) The entire NOI or Permit application package, including the full modeling study, should be submitted electronically on compact disk(s) (CD). For permit application submittals, two CD copies are required (in sleeves, not crystal cases, please), with additional CD copies as specified below. NOI applications require only a single CD submittal.

4) If **air dispersion modeling** is required by the application type, include the **NMED Modeling Waiver OR** one additional electronic copy of the air dispersion modeling including the input and output files. The dispersion modeling ***summary report only*** should be submitted as hard copy(ies) unless otherwise indicated by the Bureau. The complete dispersion modeling study, including all input/output files, should be submitted electronically as part of the electronic submittal.

5) If subject to PSD review under 20.2.74 NMAC (PSD) or NNSR under 20.2.79 NMC include,
   a. one additional CD copy for US EPA,
   b. one additional CD copy for each federal land manager affected (NPS, USFS, FWS, USDI) and,
   c. one additional CD copy for each affected regulatory agency other than the Air Quality Bureau.

Electronic Submittal Requirements [in addition to the required hard copy(ies)]:

1) All required electronic documents shall be submitted in duplicate (2 separate CDs). A single PDF document of the entire application as submitted and the individual documents comprising the application.

2) The documents should also be submitted in Microsoft Office compatible file format (Word, Excel, etc.) allowing us to access the text and formulas in the documents (copy & paste). Any documents that cannot be submitted in a Microsoft Office compatible format shall be saved as a PDF file from within the electronic document that created the file. If you are unable to provide Microsoft office compatible electronic files or internally generated PDF files of files (items that were not created electronically: i.e. brochures, maps, graphics, etc,), submit these items in hard copy format with the number of additional hard copies corresponding to the number of CD copies required. We must be able to review the formulas and inputs that calculated the emissions.

3) It is preferred that this application form be submitted as 3 electronic files (2 MSWord docs: Universal Application section 1 and Universal Application section 3-19) and 1 Excel file of the tables (Universal Application section 2) on the CD(s). Please include as many of the 3-19 Sections as practical in a single MS Word electronic document. Create separate electronic file(s) if a single file becomes too large or if portions must be saved in a file format other than MS Word.

4) The electronic file names shall be a maximum of 25 characters long (including spaces, if any). The format of the electronic Universal Application shall be in the format: "A-3423-FacilityName". The "A" distinguishes the file as an application submittal, as opposed to other documents the Department itself puts into the database. Thus, all electronic application submittals should begin with "A-". Modifications to existing facilities should use the core permit number (i.e. '3423') the Department assigned to the facility as the next 4 digits. Use 'XXXX' for new facility applications. The format of any separate electronic submittals (additional submittals such as non-Word attachments, re-submittals, application updates) and Section document shall be in the format: "A-3423-9-description", where "9" stands for the section # (in this case Section 9-Public Notice). Please refrain, as much as possible, from submitting any scanned documents as this file format is extremely large, which uses up too much storage capacity in our database. Please take the time to fill out the header information throughout all submittals as this will identify any loose pages, including the Application Date (date submitted) & Revision # (0 for original, 1, 2, etc.; which will help keep track of subsequent partial update(s) to the original submittal. The footer information should not be modified by the applicant.

										☐ Existi ☐ New ☐ To Be		

[1] Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.
[2] Specify dates required to determine regulatory applicability.
[3] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.
[4] "4SLB" means four stroke lean burn engine, "4SRB" means four stroke rich burn engine, "2SLB" means two stroke lean burn engine, "CI" means compression ignition, and "SI" means spark ignition

Table 2-B: Insignificant Activities[1] (20.2.70 NMAC) OR Exempted Equipment (20.2.72 NMAC)

All 20.2.70 NMAC (Title V) applications must list all Insignificant Activities in this table. All 20.2.72 NMAC applications must list Exempted Equipment in this table. If equipment listed on this table is exempt under 20.2.72.202.B.5, include emissions calculations and emissions totals for 202.B.5 "similar functions" units, operations, and activities in Section 6, Calculations. Equipment and activities exempted under 20.2.72.202 NMAC may not necessarily be Insignificant under 20.2.70 NMAC (and vice versa). Unit & stack numbering must be consistent throughout the application package. Per Exemptions Policy 02-012.00 (see http://www.env.nm.gov/aqb/permit/aqb_pol.html), 20.2.72.202.B NMAC Exemptions do not apply, but 20.2.72.202.A NMAC exemptions do apply to NOI facilities under 20.2.73 NMAC. List 20.2.72.301.D.4 NMAC Auxiliary Equipment for Streamline applications in Table 2-A. The List of Insignificant Activities (for TV) can be found online at http://www.env.nm.gov/aqb/forms/InsignificantListTitleV.pdf . TV sources may elect to enter both TV Insignificant Activities and Part 72 Exemptions on this form.

Unit Number	Source Description	Manufacturer	Model No. / Serial No.	Max Capacity / Capacity Units	List Specific 20.2.72.202 NMAC Exemption (e.g. 20.2.72.202.B.5) / Insignificant Activity citation (e.g. IA List Item #1.a)	Date of Manufacture /Reconstruction[2] / Date of Installation /Construction[2]	For Each Piece of Equipment, Check One

[1] Insignificant activities exempted due to size or production rate are defined in 20.2.70.300.D.6, 20.2.70.7.Q NMAC, and the NMED/AQB List of Insignificant Activities, dated September 15, 2008. Emissions from these insignificant activities do not need to be reported, unless specifically requested.

[2] Specify date(s) required to determine regulatory applicability.

Table 2-C: Emissions Control Equipment

Unit and stack numbering must correspond throughout the application package. Only list control equipment for TAPs if the TAP's maximum uncontrolled emissions rate is over its respective threshold as listed in 20.2.72 NMAC, Subpart V, Tables A and B. In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions.

Control Equipment Unit No.	Control Equipment Description	Date Installed	Controlled Pollutant(s)	Controlling Emissions for Unit Number(s)[1]	Efficiency (% Control by Weight)	Method used to Estimate Efficiency
	Evaporative sprayers by design have no control equipment.					

[1] List each control device on a separate line. For each control device, list all emission units controlled by the control device.

Company Name | Facility Name | Application Date: | Revision #

Table 2-D: Maximum Emissions (under normal operating conditions)

☐ This Table was intentionally left blank because it would be identical to Table 2-E.

Maximum Emissions are the emissions at maximum capacity and prior to (in the absence of) pollution control, emission-reducing process equipment, or any other emission reduction. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum plant capacity without pollution controls for 8760 hours per year, unless otherwise approved by the Department. List Hazardous Air Pollutants (HAP) & Toxic Air Pollutants (TAPs) in Table 2-I. Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

[1] Condensable Particulate Matter: Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for TSP unless TSP is set equal to PM10 and PM2.5.

Company Name | Facility Name | Application Date: | Revision #

Table 2-F: Additional Emissions during Startup, Shutdown, and Routine Maintenance (SSM)

x This table is intentionally left blank since all emissions at this facility due to routine or predictable startup, shutdown, or scehduled maintenance are no higher than those listed in Table 2-E and a malfunction emission limit is not already permitted or requested. If you are required to report GHG emissions as described in Section 6a, include any GHG emissions during Startup, Shutdown, and/or Scheduled Maintenance (SSM) in Table 2-P. Provide an explanations of SSM emissions in Section 6 and 6a.

All applications for facilities that have emissions during routine our predictable startup, shutdown or scheduled maintenance (SSM)[1], including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). In Section 6 and 6a, provide emissions calculations for all SSM emissions reported in this table. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (https://www.env.nm.gov/aqb/permit/aqb_pol.html) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

Unit No.	NOx		CO		VOC		SOx		TSP[1]		PM10[1]		PM2.5[2]		H_2S		Lead	
	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
Totals																		

[1] For instance, if the short term steady-state Table 2-E emissions are 5 lb/hr and the SSM rate is 12 lb/hr, enter 7 lb/hr in this table. If the annual steady-state Table 2-E emissions are 21.9 TPY, and the number of scheduled SSM events result in annual emissions of 31.9 TPY, enter 10.0 TPY in the table below.

[1] **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for TSP unless TSP is set equal to PM10 and PM2.5.

Table 2-G: Stack Exit and Fugitive Emission Rates for Special Stacks

x I have elected to leave this table blank because this facility does not have any stacks/vents that split emissions from a single source or combine emissions from more than one source listed in table 2-A. Additionally, the emission rates of all stacks match the Requested allowable emission rates stated in Table 2-E.

Use this table to list stack emissions (requested allowable) from split and combined stacks. List Toxic Air Pollutants (TAPs) and Hazardous Air Pollutants (HAPs) in Table 2-I. List all fugitives that are associated with the normal, routine, and non-emergency operation of the facility. Unit and stack numbering must correspond throughout the application package. Refer to Table 2-E for instructions on use of the "-" symbol and on significant figures.

Stack No.	Serving Unit Number(s) from Table 2-A	NOx		CO		VOC		SOx		TSP		PM10		PM2.5		☐ H_2S or ☐	
		lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
Totals:																	

Company Name | Facility Name | Application Date: | Revision #

Table 2-H: Stack Exit Conditions

Unit and stack numbering must correspond throughout the application package. Include the stack exit conditions for each unit that emits from a stack, including blowdown venting parameters and tank emissions. If the facility has multiple operating scenarios, complete a separate Table 2-H for each scenario and, for each, type scenario name here:

Stack Number	Serving Unit Number(s) from Table 2-A	Orientation (H-Horizontal V=Vertical)	Rain Caps (Yes or No)	Height Above Ground (ft)	Temp. (F)	Flow Rate (acfs)	Flow Rate (dscfs)	Moisture by Volume (%)	Velocity (ft/sec)	Inside Diameter or L x W (ft)
There are no stacks present. All emissions are fugitive.										

Table 2-I: Stack Exit and Fugitive Emission Rates for HAPs and TAPs

In the table below, report the Potential to Emit for each HAP from each regulated emission unit listed in Table 2-A, only if the entire facility emits the HAP at a rate greater than or equal to one (1) ton per year For each such emission unit, HAPs shall be reported to the nearest 0.1 tpy. Each facility-wide Individual HAP total and the facility-wide Total HAPs shall be the sum of all HAP sources calculated to the nearest 0.1 ton per year. Per 20.2.72.403.A.1 NMAC, facilities not exempt [see 20.2.72.402.C NMAC] from TAP permitting shall report each TAP that has an uncontrolled emission rate in excess of its pounds per hour screening level specified in 20.2.72.502 NMAC. TAPs shall be reported using one more significant figure than the number of significant figures shown in the pound per hour threshold corresponding to the substance. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAAA and the TAP nomenclature as it listed in 20.2.72.502 NMAC. Include tank-flashing emissions estimates of HAPs in this table. For each HAP or TAP listed, fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected or the pollutant is emitted in a quantity less than the threshold amounts described above.

Stack No.	Unit No.(s)	Total HAPs		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here ☐ HAP or ☐TAP		Provide Pollutant Name Here HAP or ☐T

HAP and TAP emissions are estimated and shown in the attached calcuations.																			
Totals:																			

Table 2-J: Fuel

Specify fuel characteristics and usage. Unit and stack numbering must correspond throughout the application package.

Unit No.	Fuel Type (No. 2 Diesel, Natural Gas, Coal, ...)	Specify Units				
		Lower Heating Value	Hourly Usage	Annual Usage	% Sulfur	% Ash
No fuel is used. Sprayers are electric powered.						

Table 2-K: Liquid Data for Tanks Listed in Table 2-L

For each tank, list the liquid(s) to be stored in each tank. If it is expected that a tank may store a variety of hydrocarbon liquids, enter "mixed hydrocarbons" in the Composition column for that tank and enter the corresponding data of the most volatile liquid to be stored in the tank. If tank is to be used for storage of different materials, list all the materials in the "All Calculations" attachment, run the newest version of TANKS on each, and use the material with the highest emission rate to determine maximum uncontrolled and requested allowable emissions rate. The permit will specify the most volatile category of liquids that may be stored in each tank. Include appropriate tank-flashing modeling input data. Use additional sheets if necessary. Unit and stack numbering must correspond throughout the application package.

Tank No.	SCC Code	Material Name	Composition	Liquid Density (lb/gal)	Vapor Molecular Weight (lb/lb*mol)	Average Storage Conditions		Max Storage Conditions	
						Temperature (°F)	True Vapor Pressure (psia)	Temperature (°F)	True Vapor Pressure (psia)
No tanks are present.									

Company Name Facility Name Application Date: Revision #

Table 2-L: Tank Data

Include appropriate tank-flashing modeling input data. Use an addendum to this table for unlisted data categories. Unit and stack numbering must correspond throughout the application package. Use additional sheets if necessary. See reference Table 2-L2. Note: 1.00 bbl = 10.159 M3 = 42.0 gal

Tank No.	Date Installed	Materials Stored	Seal Type (refer to Table 2-LR below)	Roof Type (refer to Table 2-LR below)	Capacity		Diameter (M)	Vapor Space (M)	Color (from Table VI-C)		Paint Condition (from Table VI-C)	Annual Throughput (gal/yr)	Turn-overs (per year)
					(bbl)	(M^3)			Roof	Shell			
	No tanks are present.												

Table 2-L2: Liquid Storage Tank Data Codes Reference Table

Roof Type	Seal Type, Welded Tank Seal Type		Seal Type, Riveted Tank Seal Type		Roof, Shell Color	Paint Condition
FX: Fixed Roof	Mechanical Shoe Seal	Liquid-mounted resilient seal	Vapor-mounted resilient seal	Seal Type	WH: White	Good
IF: Internal Floating Roof	A: Primary only	A: Primary only	A: Primary only	A: Mechanical shoe, primary only	AS: Aluminum (specular)	Poor
EF: External Floating Roof	B: Shoe-mounted secondary	B: Weather shield	B: Weather shield	B: Shoe-mounted secondary	AD: Aluminum (diffuse)	
P: Pressure	C: Rim-mounted secondary	C: Rim-mounted secondary	C: Rim-mounted secondary	C: Rim-mounted secondary	LG: Light Gray	
					MG: Medium Gray	
					BL: Black	
					OT: Other (specify)	

Note: 1.00 bbl = 0.159 M^3 = 42.0 gal

Table 2-M: Materials Processed and Produced (Use additional sheets as necessary.)

Material Processed				Material Produced			
Description	Chemical Composition	Phase (Gas, Liquid, or Solid)	Quantity (specify units)	Description	Chemical Composition	Phase	Quantity (specify units)
There are no materials processed or produced. Treated water is evaporated.							

Table 2-N: CEM Equipment

Enter Continuous Emissions Measurement (CEM) Data in this table. If CEM data will be used as part of a federally enforceable permit condition, or used to satisfy the requirements of a state or federal regulation, include a copy of the CEM's manufacturer specification sheet in the Information Used to Determine Emissions attachment. Unit and stack numbering must correspond throughout the application package. Use additional sheets if necessary.

Stack No.	Pollutant(s)	Manufacturer	Model No.	Serial No.	Sample Frequency	Averaging Time	Range	Sensitivity	Accuracy
There are no CEMs present.									

Table 2-O: Parametric Emissions Measurement Equipment

Unit and stack numbering must correspond throughout the application package. Use additional sheets if necessary.

Unit No.	Parameter/Pollutant Measured	Location of Measurement	Unit of Measure	Acceptable Range	Frequency of Maintenance	Nature of Maintenance	Method of Recording	Averaging Time
There are no parametric emissions measurement equipment present.								

Company Name | Facility Name | Application Date: | Revision #

Table 2-P: Greenhouse Gas Emissions

Applications submitted under 20.2.70, 20.2.72, & 20.2.74 NMAC are required to complete this Table. Power plants, Title V major sources, and PSD major sources must report and calculate all GHG emissions for each unit. Applicants must report potential emission rates in short tons per year (see Section 6.a for assistance). Include GHG emissions during Startup, Shutdown, and Scheduled Maintenance in this table. For minor source facilities that are not power plants, are not Title V, or are not PSD, there are three options for reporting GHGs 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHG as a second separate unit; OR 3) check the following box ☐ By c

[1] GWP (Global Warming Potential): Applicants must use the most current GWPs codified in Table A-1 of 40 CFR part 98. GWPs are subject to change, therefore, applicants need to check 40 CFR 98 to confirm GWP values.

[2] For HFCs or PFCs describe the specific HFC or PFC compound and use a separate column for each individual compound.

[3] For each new compound, enter the appropriate GWP for each HFC or PFC compound from Table A-1 in 40 CFR 98.

[4] Green house gas emissions on a mass basis is the ton per year green house gas emission before adjustment with its GWP.

Potential to Emit SMI Model 120F Evaporative Sprayer

Basis

Pond TDS		54600	ppm
		0.0546	weight fraction
Water, density		8.34	lb/gallon
		1	g/cm3
		0.000001	ug/um3
Salt, density		2.2	g/cm3
	(NaCl)	0.0000022	ug/um3
Pump rate			
	Design	9	gallons/minute
	Altitude Deration	16.56	%
	Site Maximum	7.51	gallons/minute
Annual hour restriction		8760	hours per year
Evaporation rate		42.5	%

Notes

1 Vendor states pump deration for altitude is 2.3% each 1000 feet, site at 7200 feet.
2 Evaporation rate assumed is mid-point of vendor range for this model of 25 to 60%.
LANL measured evaporation rate through June 2016 is 34%.

Section 3

Application Summary

The **Application Summary** shall include a brief description of the facility and its process, the type of permit application, the applicable regulation (i.e. 20.2.72.200.A.X, or 20.2.73 NMAC) under which the application is being submitted, and any air quality permit numbers associated with this site. If this facility is to be collocated with another facility, provide details of the other facility including permit number(s). In case of a revision or modification to a facility, provide the lowest level regulatory citation (i.e. 20.2.72.219.B.1.d NMAC) under which the revision or modification is being requested. Also describe the proposed changes from the original permit, how the proposed modification will affect the facility's operations and emissions, de-bottlenecking impacts, and changes to the facility's major/minor status (both PSD & Title V).

Routine or predictable emissions during Startup, Shutdown, and Maintenance (SSM): Provide an overview of how SSM emissions are accounted for in this application. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions.

This Title V operating permit minor modification application is for the use of five spray evaporators to reduce water volume in the existing Sigma Mesa evaporation basins. These synthetically-lined evaporation basins are located within Technical Area 60. The basins are intended for use to evaporate a specific treated waste water discharge from the LANL Sanitary Effluent Treatment Facility or SERF.

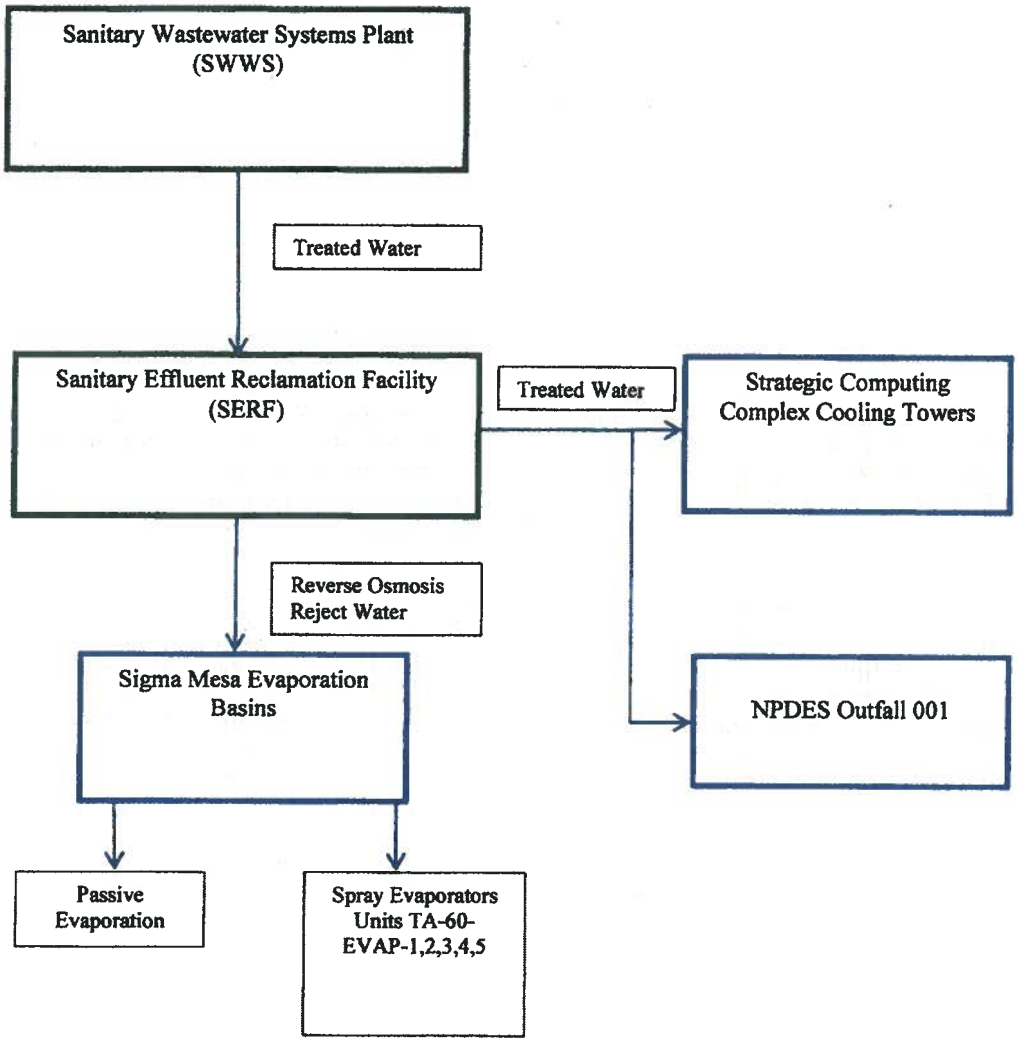
The SERF facility processes further treated LANL sanitary wastewater effluent for beneficial reuse, and is intended to conserve potable water, reduce wastewater discharges to the environment, and achieve compliance with National Pollutant Discharge Elimination System (NPDES) permit limitations. Treatment is performed using a combination of chemical precipitation, microfiltration, and reverse osmosis to remove silica and trace quantities of PCBs from the wastewater effluent. The primary chemicals used in the precipitation process (magnesium chloride/ferric chloride/sodium hydroxide), when dissociated in water, become dissolved solids which elevate the conductivity of the water considerably. These dissolved constituents have to be removed through the reverse osmosis process, which rejects the dissolved solids (primarily NaCl, or common salt). This stream of concentrated dissolved solids is then discharged to the Sigma Mesa evaporation basins. The reason for the high concentration of dissolved solids in the reject water is that high levels of silica in the effluent require substantial chemical dosing for effective removal, and then this stream is further concentrated in the treatment process as clean water which is separated from the resulting reverse osmosis reject stream. As the purpose of the SERF facility is to recover high percentages of reusable water, the relatively small percentage of reject water contains the original amount of dissolved solids in a much smaller volume, and thus is more highly concentrated.

In addition to trace quantities of hazardous or toxic air pollutants in the treated water, the only other potential air pollutant emitted from this process is particulate matter from evaporated water droplets in the evaporator's plume. Due to the high total dissolved content (TDS) of the water, potential particulate matter emissions of all size diameters is high assuming all TDS present evaporates into the air. However, only a small portion of total potential particulate matter emitted is regulated and of environmental concern. The calculations included with this application demonstrate emissions of regulated particulate matter are primarily less than 30 microns in diameter (PM30), considered by NMED to represent total suspended particulate (TSP). Annual emissions of PM10 are estimated to be less than one ton per year. No emissions of PM2.5 are projected to be present.

Section 4

Process Flow Sheet

A **process flow sheet** and/or block diagram indicating the individual equipment, all emission points and types of control applied to those points. The unit numbering system should be consistent throughout this application.



Section 5

Plot Plan Drawn To Scale

A **plot plan drawn to scale** showing emissions points, roads, structures, tanks, and fences of property owned, leased, or under direct control of the applicant. This plot plan must clearly designate the restricted area as defined in UA1, Section 1-D.12. The unit numbering system should be consistent throughout this application.

See next page. Note sprayers are portable and float within basins. Specific locations within evaporation basins are not identified.

Section 6

All Calculations

Show all calculations used to determine both the hourly and annual controlled and uncontrolled emission rates. All calculations shall be performed keeping a minimum of three significant figures. Document the source of each emission factor used (if an emission rate is carried forward and not revised, then a statement to that effect is required). If identical units are being permitted and will be subject to the same operating conditions, submit calculations for only one unit and a note specifying what other units to which the calculations apply. All formulas and calculations used to calculate emissions must be submitted. The "Calculations" tab in the UA2 has been provided to allow calculations to be linked to the emissions tables. Add additional "Calc" tabs as needed. If the UA2 or other spread sheets are used, all calculation spread sheet(s) shall be submitted electronically in Microsoft Excel compatible format so that formulas and input values can be checked. Format all spread sheets and calculations such that the reviewer can follow the logic and verify the input values. Define all variables. If calculation spread sheets are not used, provide the original formulas with defined variables. Additionally, provide subsequent formulas showing the input values for each variable in the formula. All calculations, including those calculations are imbedded in the Calc tab of the UA2 portion of the application, the printed Calc tab(s), should be submitted under this section.

Tank Flashing Calculations: The information provided to the AQB shall include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., NOI, permit, or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation.

SSM Calculations: It is the applicant's responsibility to provide an estimate of SSM emissions or to provide justification for not doing so. In this Section, provide emissions calculations for Startup, Shutdown, and Routine Maintenance (SSM) emissions listed in the Section 2 SSM and/or Section 22 GHG Tables and the rational for why the others are reported as zero (or left blank in the SSM/GHG Tables). Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on calculating SSM emissions. If SSM emissions are greater than those reported in the Section 2, Requested Allowables Table, modeling may be required to ensure compliance with the standards whether the application is NSR or Title V. Refer to the Modeling Section of this application for more guidance on modeling requirements.

Glycol Dehydrator Calculations: The information provided to the AQB shall include the manufacturer's maximum design recirculation rate for the glycol pump. If GRI-Glycalc is used, the full input summary report shall be included as well as a copy of the gas analysis that was used.

Road Calculations: Calculate fugitive particulate emissions and enter haul road fugitives in Tables 2-A, 2-D and 2-E for:

1. If you transport raw material, process material and/or product into or out of or within the facility and have PER emissions greater than 0.5 tpy.
2. If you transport raw material, process material and/or product into or out of the facility more frequently than one round trip per day.

Significant Figures:

A. All emissions standards are deemed to have at least two significant figures, but not more than three significant figures.

B. At least 5 significant figures shall be retained in all intermediate calculations.

C. In calculating emissions to determine compliance with an emission standard, the following rounding off procedures shall be used:

(1) If the first digit to be discarded is less than the number 5, the last digit retained shall not be changed;

(2) If the first digit discarded is greater than the number 5, or if it is the number 5 followed by at least one digit other than the number zero, the last figure retained shall be increased by one unit; **and**

(3) If the first digit discarded is exactly the number 5, followed only by zeros, the last digit retained shall be rounded upward if it is an odd number, but no adjustment shall be made if it is an even number.

(4) The final result of the calculation shall be expressed in the units of the standard.

Control Devices: In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device

regardless if the applicant takes credit for the reduction in emissions. The applicant can indicate in this section of the application if they chose to not take credit for the reduction in emission rates. For notices of intent submitted under 20.2.73 NMAC, only uncontrolled emission rates can be considered to determine applicability unless the state or federal Acts require the control. This information is necessary to determine if federally enforceable conditions are necessary for the control device, and/or if the control device produces its own regulated pollutants or increases emission rates of other pollutants.

The attached calculations included on the UA2 form are primarily for particulate matter but also include any measured trace quantities of any detected hazardous or toxic air pollutant. Total dissolved solids (TDS) and trace compound concentrations present in the treated waste water evaporative basins were obtained by water sample analysis by an independent laboratory and reported to LANL in a December 9, 2015 report. The highest value reported for any compound was used in the calculations. Potential to emit emission estimates assume all (5) evaporative sprayers operate 8,760 hours per year at the maximum design water pump rate derated for altitude per the vendor's recommendation of 2.3% per 1000 feet of elevation.

In order to determine what percentage of total particulate matter is of a size of environmental concern and regulated (less than 30 microns in diameter referenced as PM30), the water droplet size distribution created by the Model 120F evaporator was obtained from the vendor. The vendor contracted with a test organization to conduct testing and an analysis to provide this information. LANL obtained from the vendor the actual measured test data (water droplet size and numbers present) from the laboratory test in order to calculate regulated particulate matter percentages. Using the water droplet test data, together with equations from NMED's technical memorandum regarding estimating particulate matter emissions from evaporation of water droplets from cooling towers, the percent values of PM30, PM10, and PM2.5 were obtained and applied to the total potential to emit value for particulate matter. Less than 1% of total particulate matter constitutes PM30. Potential emissions of PM10 are below Title V insignificant activity criteria of 1 ton per year for all five sprayers. No emissions of PM2.5 are estimated to occur.

In general, for particulate matter formed by the evaporation of water droplets, high TDS values as well as larger water droplets are conducive to formation of large diameter particles. The TDS in the evaporated water is high due to the salt content. Water droplets formed by the evaporator's mechanical fan shearing are also large when compared to droplets formed by an evaporator using a nozzle and atomizer.

Section 6.a

Green House Gas Emissions

(Submitting under 20.2.70, 20.2.72 20.2.74 NMAC)

Title V (20.2.70 NMAC), Minor NSR (20.2.72 NMAC), and PSD (20.2.74 NMAC) applicants must estimate and report greenhouse gas (GHG) emissions to verify the emission rates reported in the public notice, determine applicability to 40 CFR 60 Subparts, and to evaluate Prevention of Significant Deterioration (PSD) applicability. GHG emissions that are subject to air permit regulations consist of the sum of an aggregate group of these six greenhouse gases: carbon dioxide (CO_2), nitrous oxide (N_2O), methane (CH_4), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

Calculating GHG Emissions:

1. Calculate the ton per year (tpy) GHG mass emissions and GHG CO_2e emissions from your facility.
2. GHG mass emissions are the sum of the total annual tons of greenhouse gases without adjusting with the global warming potentials (GWPs). GHG CO_2e emissions are the sum of the mass emissions of each individual GHG multiplied by its GWP found in Table A-1 in 40 CFR 98 Mandatory Greenhouse Gas Reporting.
3. Emissions from routine or predictable start up, shut down, and maintenance must be included.
4. Report GHG mass and GHG CO_2e emissions in Table 2-P of this application. Emissions are reported in **short** tons per year and represent each emission unit's Potential to Emit (PTE).
5. All Title V major sources, PSD major sources, and all power plants, whether major or not, must calculate and report GHG mass and CO2e emissions for each unit in Table 2-P.
6. For minor source facilities that are not power plants, are not Title V, and are not PSD there are three options for reporting GHGs in Table 2-P: 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHGs as a second separate unit; 3) or check the following ☐ By ch
year.

Sources for Calculating GHG Emissions:

- Manufacturer's Data
- AP-42 Compilation of Air Pollutant Emission Factors at http://www.epa.gov/ttn/chief/ap42/index.html
- EPA's Internet emission factor database WebFIRE at http://cfpub.epa.gov/webfire/
- 40 CFR 98 Mandatory Green House Gas Reporting except that tons should be reported in short tons rather than in metric tons for the purpose of PSD applicability.

- API Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry. August 2009 or most recent version.
- Sources listed on EPA's NSR Resources for Estimating GHG Emissions at http://www.epa.gov/nsr/clean-air-act-permitting-greenhouse-gases:

Global Warming Potentials (GWP):
Applicants must use the Global Warming Potentials codified in Table A-1 of the most recent version of 40 CFR 98 Mandatory Greenhouse Gas Reporting. The GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to that of one unit mass of CO_2 over a specified time period.

"Greenhouse gas" for the purpose of air permit regulations is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. **(20.2.70.7 NMAC, 20.2.74.7 NMAC).** You may also find GHGs defined in 40 CFR 86.1818-12(a).

Metric to Short Ton Conversion:
Short tons for GHGs and other regulated pollutants are the standard unit of measure for PSD and title V permitting programs. 40 CFR 98 Mandatory Greenhouse Reporting requires metric tons.
1 metric ton = 1.10231 short tons (per Table A-2 to Subpart A of Part 98 – Units of Measure Conversions)

The evaporative sprayers do not produce greenhouse gas emissions.

Section 7

Information Used To Determine Emissions

Information Used to Determine Emissions shall include the following:

- ☐ If manufacturer data are used, include specifications for emissions units and control equipment, including control efficiencies specifications and sufficient engineering data for verification of control equipment operation, including design drawings, test reports, and design parameters that affect normal operation.
- ☐ If test data are used, include a copy of the complete test report. If the test data are for an emissions unit other than the one being permitted, the emission units must be identical. Test data may not be used if any difference in operating conditions of the unit being permitted and the unit represented in the test report significantly effect emission rates.
- ☐ If the most current copy of AP-42 is used, reference the section and date located at the bottom of the page. Include a copy of the page containing the emissions factors, and clearly mark the factors used in the calculations.
- ☐ If an older version of AP-42 is used, include a complete copy of the section.
- ☐ If an EPA document or other material is referenced, include a complete copy.
- ☐ Fuel specifications sheet.
- ☐ If computer models are used to estimate emissions, include an input summary (if available) and a detailed report, and a disk containing the input file(s) used to run the model. For tank-flashing emissions, include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., permit or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.

Information used to determine emissions is noted on the UA2 calculations sheet.

Section 8

Map(s)

A map such as a 7.5 minute topographic quadrangle showing the exact location of the source. The map shall also include the following:

The UTM or Longitudinal coordinate system on both axes	An indicator showing which direction is north
A minimum radius around the plant of 0.8km (0.5 miles)	Access and haul roads
Topographic features of the area	Facility property boundaries
The name of the map	The area which will be restricted to public access
A graphical scale	

See next page.

Section 9 – Not Applicable for Title V

Proof of Public Notice

(for NSR applications submitting under 20.2.72 or 20.2.74 NMAC)
(This proof is required by: 20.2.72.203.A.14 NMAC "Documentary Proof of applicant's public notice")

☐ **I have read the AQB "Guidelines for Public Notification for Air Quality Permit Applications"**
This document provides detailed instructions about public notice requirements for various permitting actions. It also provides public notice examples and certification forms. Material mistakes in the public notice will require a re-notice before issuance of the permit.

Unless otherwise allowed elsewhere in this document, the following items document proof of the applicant's Public Notification. Please include this page in your proof of public notice submittal with checkmarks indicating which documents are being submitted with the application.

New Permit and **Significant Permit Revision** public notices must include all items in this list.

Technical Revision public notices require only items 1, 5, 9, and 10.

Per the Guidelines for Public Notification document mentioned above, include:

1. ☐ A copy of the certified letter receipts with post marks (20.2.72.203.B NMAC)
2. ☐ A list of the places where the public notice has been posted in at least four publicly accessible and conspicuous places, including the proposed or existing facility entrance. (e.g: post office, library, grocery, etc.)
3. ☐ A copy of the property tax record (20.2.72.203.B NMAC).
4. ☐ A sample of the letters sent to the owners of record.
5. ☐ A sample of the letters sent to counties, municipalities, and Indian tribes.
6. ☐ A sample of the public notice posted and a verification of the local postings.
7. ☐ A table of the noticed citizens, counties, municipalities and tribes and to whom the notices were sent in each group.
8. ☐ A copy of the public service announcement (PSA) sent to a local radio station and documentary proof of submittal.
9. ☐ A copy of the classified or legal ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
10. ☐ A copy of the display ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
11. ☐ A map with a graphic scale showing the facility boundary and the surrounding area in which owners of record were notified by mail. This is necessary for verification that the correct facility boundary was used in determining distance for notifying land owners of record.

Section 10

Written Description of the Routine Operations of the Facility

A written description of the routine operations of the facility. Include a description of how each piece of equipment will be operated, how controls will be used, and the fate of both the products and waste generated. For modifications and/or revisions, explain how the changes will affect the existing process. In a separate paragraph describe the major process bottlenecks that limit production. The purpose of this description is to provide sufficient information about plant operations for the permit writer to determine appropriate emission sources.

The evaporator model chosen is the SMI 120F. This model is a floating mechanical evaporator designed for use in small ponds where control of wet or dry particulate drift can be optimized. The plume height and direction can be varied in order to adjust water droplet drift and create maximum evaporation rates. The floating design allows the device to be used on the pond surface rather than adjacent to the pond which minimizes drift onto a land surface. This evaporator type utilizes a high-speed fan to mechanically shear the injected water into droplets which are then projected into the plume for evaporation. Operation of the sprayers will be dependent on atmospheric conditions (wind speed and temperature) to achieve acceptable evaporation rates. According to specific needs, more than one sprayer may be used in a given pond to enhance evaporation at a particular basin.

Section 11

Source Determination

Source submitting under 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC

Sources applying for a construction permit, PSD permit, or operating permit shall evaluate surrounding and/or associated sources (including those sources directly connected to this source for business reasons) and complete this section. Responses to the following questions shall be consistent with the Air Quality Bureau's permitting guidance, Single Source Determination Guidance, which may be found on the Applications Page in the Permitting Section of the Air Quality Bureau website.

Typically, buildings, structures, installations, or facilities that have the same SIC code, that are under common ownership or control, and that are contiguous or adjacent constitute a single stationary source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes. Submission of your analysis of these factors in support of the responses below is optional, unless requested by NMED.

A. Identify the emission sources evaluated in this section (list and describe):
Five (5) SMI Model 120 evaporative sprayers.

B. Apply the 3 criteria for determining a single source:

SIC Code: Surrounding or associated sources belong to the same 2-digit industrial grouping (2-digit SIC code) as this facility, OR surrounding or associated sources that belong to different 2-digit SIC codes are support facilities for this source.

☐ **Yes** √ **No**

Common Ownership or Control: Surrounding or associated sources are under common ownership or control as this source.

☐ **Yes** √ **No**

Contiguous or Adjacent: Surrounding or associated sources are contiguous or adjacent with this source.

☐ **Yes** √ **No**

C. Make a determination:

☐ The source, as described in this application, constitutes the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes. If in "A" above you evaluated only the source that is the subject of this application, all "**YES**" boxes should be checked. If in "A" above you evaluated other sources as well, you must check **AT LEAST ONE** of the boxes "**NO**" to conclude that the source, as described in the application, is the entire source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes.

√ The source, as described in this application, **does not** constitute the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes (A permit may be issued for a portion of a source). The entire source consists of the following facilities or emissions sources (list and describe): **This is a minor permit modification to existing Title V Permit P100-R2. The entire source consists of all sources in Permit P100-R2 plus the new evaporative sprayers subject to this minor modification. Existing equipment and sources within Permit P100-R2 are not subject to this minor modification.**

Section 12-Not Applicable for Title V

Section 12.A
PSD Applicability Determination for All Sources

(Submitting under 20.2.72, 20.2.74 NMAC)

A PSD applicability determination for all sources. For sources applying for a significant permit revision, apply the applicable requirements of 20.2.74.AG and 20.2.74.200 NMAC and to determine whether this facility is a major or minor PSD source, and whether this modification is a major or a minor PSD modification. It may be helpful to refer to the procedures for Determining the Net Emissions Change at a Source as specified by Table A-5 (Page A.45) of the EPA New Source Review Workshop Manual to determine if the revision is subject to PSD review.

A. This facility is:

- √ **a minor PSD source before and after this modification (if so, delete C and D below).**
- ☐ **a major PSD source before this modification. This modification will make this a PSD minor source.**
- ☐ **an existing PSD Major Source that has never had a major modification requiring a BACT analysis.**
- ☐ **an existing PSD Major Source that has had a major modification requiring a BACT analysis**
- ☐ **a new PSD Major Source after this modification.**

B. **This facility [is or is not] one of the listed 20.2.74.501 Table I – PSD Source Categories. The "project" emissions for this modification are [significant or not significant]. [Discuss why.] The "project" emissions listed below [do or do not] only result from changes described in this permit application, thus no emissions from other [revisions or modifications, past or future] to this facility. Also, specifically discuss whether this project results in "de-bottlenecking", or other associated emissions resulting in higher emissions. The project emissions (before netting) for this project are as follows [see Table 2 in 20.2.74.502 NMAC for a complete list of significance levels]:**

a. **NOx: XX.X TPY**
b. **CO: XX.X TPY**
c. **VOC: XX.X TPY**
d. **SOx: XX.X TPY**
e. **TSP (PM): XX.X TPY**
f. **PM10: XX.X TPY**
g. **PM2.5: XX.X TPY**
h. **Fluorides: XX.X TPY**
i. **Lead: XX.X TPY**
j. **Sulfur compounds (listed in Table 2): XX.X TPY**
k. **GHG: XX.X TPY**

Section 13

Discussion Demonstrating Compliance with Each Applicable State & Federal Regulation

---

Provide a discussion demonstrating compliance with applicable state & federal regulation. If there is a state or federal regulation (other than those listed here) for your facility's source category that does not apply to your facility, but seems on the surface that it should apply, add the regulation to the appropriate table below and provide the analysis. Examples of regulatory requirements that may or may not apply to your facility include 40 CFR 60 Subpart OOO (crushers), 40 CFR 63 Subpart HHH (HAPs), or 20.2.74 NMAC (PSD major sources). We don't want a discussion of every non-applicable regulation, but if there is questionable applicability, explain why it does not apply. All input cells should be filled in, even if the response is 'No' or 'N/A'.

In the "Justification" column, identify the criteria that are critical to the applicability determination, numbering each. For each unit listed in the "Applies to Unit No(s)" column, after each listed unit, include the number(s) of the criteria that made the regulation applicable. For example, TK-1 & TK-2 would be listed as: TK-1 (1, 3, 4), TK-2 (1, 2, 4). Doing so will provide the applicability criteria for each unit, while also minimizing the length of these tables.

As this table will become part of the SOB, please do not change the any formatting in the table, especially the width of the table.

If this application includes any proposed exemptions from otherwise applicable requirements, provide a narrative explanation of these proposed exemptions. These exemptions are from specific applicable requirements, which are spelled out in the requirements themselves, not exemptions from 20.2.70 NMAC or 20.2.72 NMAC.

There is no applicable state or federal regulation which applies to the proposed evaporative sprayers' operation.

Section 14

Operational Plan to Mitigate Emissions

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

√ **Title V Sources** (20.2.70 NMAC): By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Emissions During Startups, Shutdowns, and Emergencies** defining the measures to be taken to mitigate source emissions during startups, shutdowns, and emergencies as required by 20.2.70.300.D.5(f) and (g) NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.

☐ **NSR** (20.2.72 NMAC), **PSD** (20.2.74 NMAC) **& Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Source Emissions During Malfunction, Startup, or Shutdown** defining the measures to be taken to mitigate source emissions during malfunction, startup, or shutdown as required by 20.2.72.203.A.5 NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.

☐ **Title V** (20.2.70 NMAC), **NSR** (20.2.72 NMAC), **PSD** (20.2.74 NMAC) **& Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has established and implemented a Plan to Minimize Emissions During Routine or Predictable Startup, Shutdown, and Scheduled Maintenance through work practice standards and good air pollution control practices as required by 20.2.7.14.A and B NMAC. This plan shall be kept on site or at the nearest field office to be made available to the Department upon request. This plan should not be submitted with this application.

Section 15

Alternative Operating Scenarios

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

Alternative Operating Scenarios: Provide all information required by the department to define alternative operating scenarios. This includes process, material and product changes; facility emissions information; air pollution control equipment requirements; any applicable requirements; monitoring, recordkeeping, and reporting requirements; and compliance certification requirements. Please ensure applicable Tables in this application are clearly marked to show alternative operating scenario.

There are no alternative operating scenarios proposed.

Section 16

Air Dispersion Modeling

1) Minor Source Construction (20.2.72 NMAC) and Prevention of Significant Deterioration (PSD) (20.2.74 NMAC) ambient impact analysis (modeling): Provide an ambient impact analysis as required at 20.2.72.203.A(4) and/or 20.2.74.303 NMAC and as outlined in the Air Quality Bureau's Dispersion Modeling Guidelines found on the Planning Section's modeling website. If air dispersion modeling has been waived for one or more pollutants, attach the AQB Modeling Section modeling waiver approval documentation.
2) SSM Modeling: Applicants must conduct dispersion modeling for the total short term emissions during routine or predictable startup, shutdown, or maintenance (SSM) using realistic worst case scenarios following guidance from the Air Quality Bureau's dispersion modeling section. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions modeling requirements.
3) Title V (20.2.70 NMAC) ambient impact analysis: Title V applications must specify the construction permit and/or Title V Permit number(s) for which air quality dispersion modeling was last approved. Facilities that have only a Title V permit, such as landfills and air curtain incinerators, are subject to the same modeling required for preconstruction permits required by 20.2.72 and 20.2.74 NMAC.

What is the purpose of this application?	Enter an X for each purpose that applies
New PSD major source or PSD major modification (20.2.74 NMAC). See #1 above.	
New Minor Source or significant permit revision under 20.2.72 NMAC (20.2.72.219.D NMAC). See #1 above. **Note:** Neither modeling nor a modeling waiver is required for VOC emissions.	
Reporting existing pollutants that were not previously reported.	
Reporting existing pollutants where the ambient impact is being addressed for the first time.	
Title V application (new, renewal, significant, or minor modification. 20.2.70 NMAC). See #3 above.	**X NSR-2195B-M2**
Relocation (20.2.72.202.B.4 or 72.202.D.3.c NMAC)	
Minor Source Technical Permit Revision 20.2.72.219.B.1.d.vi NMAC for like-kind unit replacements.	
Other: i.e. SSM modeling. See #2 above.	
This application does not require modeling since this is a No Permit Required (NPR) application.	
This application does not require modeling since this is a Notice of Intent (NOI) application (20.2.73 NMAC).	
This application does not require modeling according to 20.2.70.7.E (11), 20.2.72.203.A(4), 20.2.74.303, 20.2.79.109.D NMAC and in accordance with the Air Quality Bureau's Modeling Guidelines.	**X**

Check each box that applies:

☐ See attached, approved modeling **waiver for all** pollutants from the facility.

☐ See attached, approved modeling **waiver for some** pollutants from the facility.

☐ Attached in Universal Application Form 4 (UA4) is a **modeling report for all** pollutants from the facility.

☐ Attached in UA4 is a **modeling report for some** pollutants from the facility.

√ No modeling is required. The New Mexico TSP ambient standard is not a Title V applicable requirement. The PM10 potential emission rate is 0.01 lbs/hr per sprayer. There are no emissions of PM2.5 estimated to occur.

Section 17

Compliance Test History

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

To show compliance with existing NSR permits conditions, you must submit a compliance test history. The table below provides an example.

The evaporative sprayers are not operational and have no compliance test history.

Section 19

Requirements for Title V Program

Do not print this section unless this is a Title V application.

Who Must Use this Attachment:

* Any major source as defined in 20.2.70 NMAC.
* Any source, including an area source, subject to a standard or other requirement promulgated under Section 111 - Standards of Performance for New Stationary Sources, or Section 112 Hazardous Air Pollutants, of the 1990 federal Clean Air Act ("federal Act"). Non-major sources subject to Sections 111 or 112 of the federal Act are exempt from the obligation to obtain an 20.2.70 NMAC operating permit until such time that the EPA Administrator completes rulemakings that require such sources to obtain operating permits. In addition, sources that would be required to obtain an operating permit solely because they are subject to regulations or requirements under Section 112(r) of the federal Act are exempt from the requirement to obtain an Operating Permit.
* Any Acid Rain source as defined under title IV of the federal Act. The Acid Rain program has additional forms. See http://www.env.nm.gov/aqb/index.html. Sources that are subject to both the Title V and Acid Rain regulations are encouraged to submit both applications simultaneously.
* Any source in a source category designated by the EPA Administrator ("Administrator"), in whole or in part, by regulation, after notice and comment.

19.1 - 40 CFR 64, Compliance Assurance Monitoring (CAM) (20.2.70.300.D.10.e NMAC)

Any source subject to 40CFR, Part 64 (Compliance Assurance Monitoring) must submit all the information required by section 64.7 with the operating permit application. The applicant must prepare a separate section of the application package for this purpose; if the information is already listed elsewhere in the application package, make reference to that location. Facilities not subject to Part 64 are invited to submit periodic monitoring protocols with the application to help the AQB to comply with 20.2.70 NMAC. Sources subject to 40 CFR Part 64, must submit a statement indicating your source's compliance status with any enhanced monitoring and compliance certification requirements of the federal Act.

Part 64 does not apply to the evaporative sprayers.

19.2 - Compliance Status (20.2.70.300.D.10.a & 10.b NMAC)

Describe the facility's compliance status with each applicable requirement at the time this permit application is submitted. This statement should include descriptions of or references to all methods used for determining compliance. This statement should include descriptions of monitoring, recordkeeping and reporting requirements and test methods used to determine compliance with all applicable requirements. Refer to Section 2, Tables 2-N and 2-O of the Application Form as necessary. (20.2.70.300.D.11 NMAC) For facilities with existing Title V permits, refer to most recent Compliance Certification for existing requirements. Address new requirements such as CAM, here, including steps being taken to achieve compliance.

The most recent Title V Compliance Certification Report was submitted in January 2016 and indicates compliance with all applicable requirements. One permit deviation without any excess emission was noted and corrective action was taken to resolve.

19.3 - Continued Compliance (20.2.70.300.D.10.c NMAC)

Provide a statement that your facility will continue to be in compliance with requirements for which it is in compliance at the time of permit application. This statement must also include a commitment to comply with other applicable requirements as they come into effect during the permit term. This compliance must occur in a timely manner or be consistent with such schedule expressly required by the applicable requirement.

This facility will continue to be in compliance with requirements for which it is in compliance at the time of this permit application, and will in a timely manner, meet additional requirements that become effective during the permit term.

19.4 - Schedule for Submission of Compliance (20.2.70.300.D.10.d NMAC)

You must provide a proposed schedule for submission to the department of compliance certifications during the permit term. This certification must be submitted annually unless the applicable requirement or the department specifies a more frequent period. A sample form for these certifications will be attached to the permit.

The proposed schedule for submission of the Annual Compliance Certification Report is the schedule currently in Section A109 of Permit P100-R2. The schedule requires submittal of the report within 30 days of the end of the 12-month reporting period which starts on January 1st each year.

19.5 - Stratospheric Ozone and Climate Protection

In addition to completing the four (4) questions below, you must submit a statement indicating your source's compliance status with requirements of Title VI, Section 608 (National Recycling and Emissions Reduction Program) and Section 609 (Servicing of Motor Vehicle Air Conditioners).

---

1. Does your facility have any air conditioners or refrigeration equipment that uses CFCs, HCFCs or other ozone-depleting substances? √ Yes ☐ No

2. Does any air conditioner(s) or any piece(s) of refrigeration equipment contain a refrigeration charge greater than 50 lbs? √ Yes ☐ No

   (If the answer is yes, describe the type of equipment and how many units are at the facility.)

   There are 262 refrigeration units in active inventory at this facility containing a charge of 50 pounds or more of refrigerant. There are various duty types of units such as chillers and heating and air conditioning units. Nearly 85% of the units are used for comfort cooling purposes. The remaining percentage consists of units that are tied to different processes. An example would be chillers that cool computer rooms.

3. Do your facility personnel maintain, service, repair, or dispose of any motor vehicle air conditioners (MVACs) or appliances ("appliance" and "MVAC" as defined at 82. 152)? √ Yes ☐ No

4. Cite and describe which Title VI requirements are applicable to your facility (i.e. 40 CFR Part 82, Subpart A through G.) 40 CFR Part 82, Subparts B, F, H and I.

This facility is in compliance with all Title VI, Section 608 and Section 609 requirements.

19.6 - Compliance Plan and Schedule

Applications for sources, which are not in compliance with all applicable requirements at the time the permit application is submitted to the department, must include a proposed compliance plan as part of the permit application package. This plan shall include the information requested below:

A. **Description of Compliance Status:** (20.2.70.300.D.11.a NMAC)
A narrative description of your facility's compliance status with respect to all applicable requirements (as defined in 20.2.70 NMAC) at the time this permit application is submitted to the department.

B. **Compliance plan:** (20.2.70.300.D.11.B NMAC)
A narrative description of the means by which your facility will achieve compliance with applicable requirements with which it is not in compliance at the time you submit your permit application package.

C. **Compliance schedule:** (20.2.70.300D.11.c NMAC)
A schedule of remedial measures that you plan to take, including an enforceable sequence of actions with milestones, which will lead to compliance with all applicable requirements for your source. This schedule of compliance must be at least as stringent as that contained in any consent decree or administrative order to which your source is subject. The obligations of any consent decree or administrative order are not in any way diminished by the schedule of compliance.

D. **Schedule of Certified Progress Reports:** (20.2.70.300.D.11.d NMAC)
A proposed schedule for submission to the department of certified progress reports must also be included in the compliance schedule. The proposed schedule must call for these reports to be submitted at least every six (6) months.

E. **Acid Rain Sources:** (20.2.70.300.D.11.e NMAC)
If your source is an acid rain source as defined by EPA, the following applies to you. For the portion of your acid rain source subject to the acid rain provisions of title IV of the federal Act, the compliance plan must also include any additional requirements under the acid rain provisions of title IV of the federal Act. Some requirements of title IV regarding the schedule and methods the source will use to achieve compliance with the acid rain emissions limitations may supersede the requirements of title V and 20.2.70 NMAC. You will need to consult with the Air Quality Bureau permitting staff concerning how to properly meet this requirement.

NOTE: The Acid Rain program has additional forms. See http://www.env.nm.gov/aqb/index.html. Sources that are subject to both the Title V and Acid Rain regulations are **encouraged** to submit both applications **simultaneously**.

A compliance plan and schedule is not required for this facility.

19.7 - 112(r) Risk Management Plan (RMP)

Any major sources subject to section 112(r) of the Clean Air Act must list all substances that cause the source to be subject to section 112(r) in the application. The permittee must state when the RMP was submitted to and approved by EPA.

This facility is not subject to the Section 112(r) requirements.

19.8 - Distance to Other States, Bernalillo, Indian Tribes and Pueblos

Will the property on which the facility is proposed to be constructed or operated be closer than 80 km (50 miles) from other states, local pollution control programs, and Indian tribes and pueblos (20.2.70.402.A.2 and 20.2.70.7.B NMAC)?

(If the answer is yes, state which apply and provide the distances.)

This facility is within 80 km of the following Indian tribes and pueblos and a local pollution control program as follows with distances indicated in km:
Taos Pueblo (69), Picuris Pueblo (56), Jicarilla Apache (67), Ohkay Owingeh Pueblo (19), Santa Clara Pueblo (10), San Ildefonso Pueblo (5), Pojoaque Pueblo (13), Nambe Pueblo (24), Tesuque Pueblo (19), Cochiti Pueblo (13), Santa Domingo Pueblo (27), Zia Pueblo (30), San Felipe Pueblo (38), Santa Ana Pueblo (40), Jemez Pueblo (19), Sandia Pueblo (61), Laguna Pueblo (77), Bernalillo County - Albuquerque Air Quality Division (56).

Section 20

Other Relevant Information

Other relevant information. Use this attachment to clarify any part in the application that you think needs explaining. Reference the section, table, column, and/or field. Include any additional text, tables, calculations or clarifying information.

Additionally, the applicant may propose specific permit language for AQB consideration. In the case of a revision to an existing permit, the applicant should provide the old language and the new language in track changes format to highlight the proposed changes. If proposing language for a new facility or language for a new unit, submit the proposed operating condition(s), along with the associated monitoring, recordkeeping, and reporting conditions. In either case, please limit the proposed language to the affected portion of the permit.

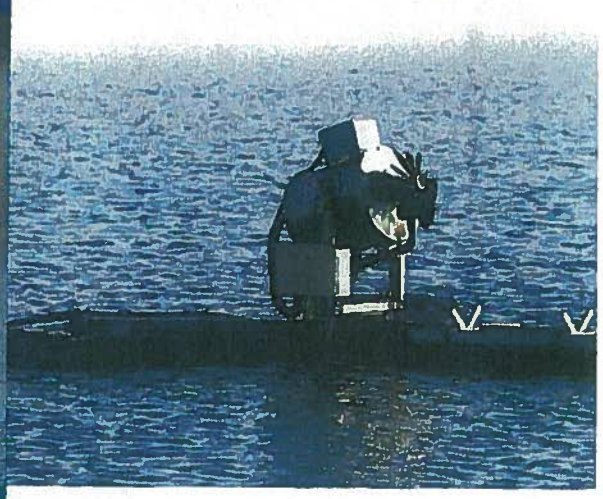
SMI 120F EVAPORATOR



OVERVIEW

The SMI® 120F is a floating mechanical Evaporator, specifically designed for small ponds where the end user is concerned about controlling wet and dry particulate drift. The 120F Evaporator is simple to use, easy to maintain, and constructed from high grade materials for years of reliable operation.

BENEFITS

Low Buildup: Designed with a minimal amount of top surface area to control the build-up of residue and scale, helping to reduce clean up and maintenance.

High Performance: High-speed fan blade rotation creates an optimum water droplet distribution for evaporation. Annual evaporation rates up to 70% could be achieved and averages will typically be between 25% and 60%.*

Easy Maintenance: The machine is designed for easy cleaning and maintenance. It requires no weekly bearing lubrication, as it is lubricated for the life of the motor. Pump is fitted with a static inlet filter that can be removed for cleaning. Pump sleeve is designed with a viewing port to simplify inspecting for scale build-up and obstructions in the pump inlet.

Minimal Clogging: The SMI® 120F can pass particles up to 3/16 inch (4.7 mm) in diameter, which reduces the need for prefiltering, filter cleaning and the hassles of clogged nozzles.

Extreme Duty: This design has evolved from 20 years of experience in industrial and extreme outdoor applications. Polyethylene pontoons are filled with closed-cell polyurethane foam, ensuring buoyancy even after any accidental puncturing of the plastic outer shell. Critical components are manufactured from stainless steel for extended life in harsh environments. "Corrosion package" upgrade is available for all stainless steel construction for high and low pH applications.

FEATURES

Floating unit supported by plastic pontoons containing closed-cell PU foam.

Head adjusts at increments from 0 to 90 degrees to allow a lower plume height to reduce drift distance, and thus reduce shut-downs due to high winds.

Heavy industrial construction, including stainless steel motor enclosure, spray manifold and fan blade, increasing durability and equipment life span.

Optional vibration sensor available to shut down motor before catastrophic failure due to residue or ice build-up.

304 stainless steel submersible pump attached to floating frame with integrated static filter and viewing port for ease of maintenance and inspection.

*Evaporation rates depend on many factors including ambient temperature, relative humidity, water makeup and chemistry, wind conditions, solar radiation and site topography.

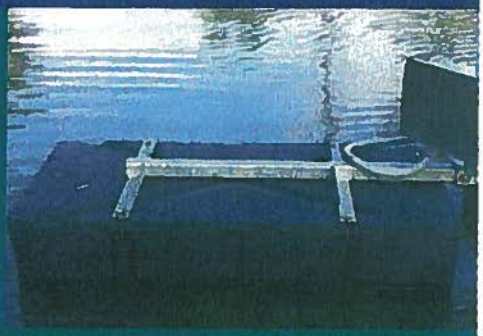
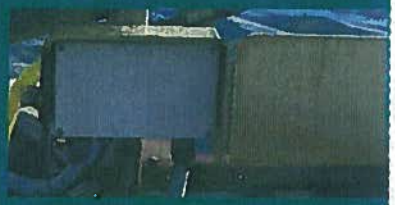
SMI 120F EVAPORATOR

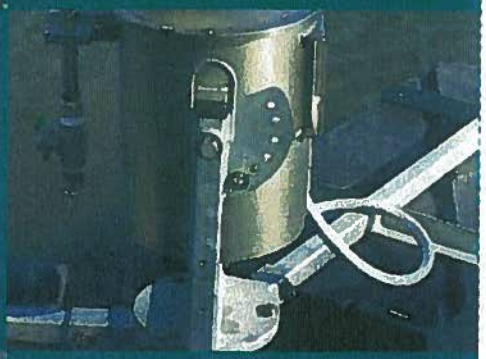


Close up of UV stabilized pontoon filled with closed cell PU Foam

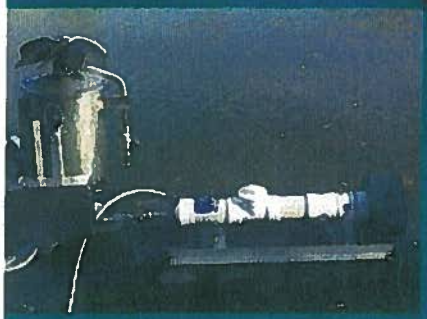
Optional vibration switch to automatically shutdown the fan from scale build up on the propeller and protect from premature motor failure from fan imbalance. Comes housed in a second enclosure to provide additional protection against water ingress



Water shield covering junction box to provide dual protection for water ingress to electrical terminations



Indexible head for fan inclination of 0-90 degrees



Pump holder for ease of pump inspection and maintenance

SPECIFICATIONS

Fan and Head Assembly

- Stainless steel patented fan
- Stainless steel enclosure protects fan motor from water ingress and exposure to harsh waste water
- Optional vibration sensor to protect motor from propeller imbalance

Floats and Mount

- Galvanized steel frame structure assembled with stainless steel fasteners
- (3) UV stabilized pontoons filled closed cell PU foam

Water System

- 1/2 HP (0.37 kW) stainless steel submersible pump
- Pump options: 460V / 60HZ, 380-415V / 50HZ, or 575V /60HZ
- Stainless steel spray manifold with large holes to allow large particles to pass
- Ball valve to regulate flow to spray manifold for changing weather conditions on manual units; pump VFD to temperature/humidity algorithm for auto units

Electrical

- 5 HP (3.7 kW) Premium efficiency fan motor
- Fan motor rotates at 3600 RPM at 480 or 575 volts, 3 phase, 60 cycle power or 2900 RPM at 380-415 volts 50 cycle power
- Nema 4X control panel with manual, standalone or premium automated controls
- Submersible rated electrical power cord, length per customer requirements

Warranty

- 6 month warranty on any defective parts and workmanship

Options

- "Corrosion Package" for upgrading galvanized mount to all stainless steel construction for acidic or highly alkaline water applications
- Standalone Automation: local machine control and customer interface, pump VFD varies based upon temperature/humidity algorithm and wind speed / direction start-up and shutdown
- Premium Automation – local and remote machine control and customer interface, pump VFD varies based upon temperature/humidity algorithm, wind speed direction start-up and shutdown, camera to monitor equipment, SmartH2O software with Desktop PC that provides reporting, trending, alarms and remote control.
- Vibration sensor for motor shut down due to fan imbalance from deposits or scale buildup

Section 22: Certification

Company Name: Los Alamos National Security, LLC

I, Michael T. Brandt , hereby certify that the information and data submitted in this application are true and as accurate as possible, to the best of my knowledge and professional expertise and experience.

Los Alamos Site Office
Po Box 1663 Mail Stop K490
Los Alamos, NM 87545

Re: Air Quality Operating Permit Application Number P100R2M1
TEMPO/Idea ID Number 856 - PRT20160001
Los Alamos National Laboratory

Dear Mr. Grieggs:

This letter acknowledges the receipt of your operating permit application for the Los Alamos National Laboratory located in the town of Los Alamos in Los Alamos County, New Mexico. The Department received this application on July 25, 2016 and assigned it number P100R2M1.

The Department has determined that the information submitted in the application is sufficient to process the requested operating permit. Therefore, this application is ruled complete on July 26, 2016.

The application requests a Title V Minor Modification to install five SMI Evaporative Solutions Model 120F spray evaporators in the evaporation basins at the LANL Sanitary Effluent Treatment Facility (SERF). The emissions from these units were calculated based on continuous operation (8760 hours/year) at the maximum (altitude-derated) capacity of the units, so no emission limits are required in the permit at this time. Reporting of fugitive emissions of particulate matter for these units is not required under the Title V permit P100R2. Therefore, as allowed under 20.2.70.404.B(6) NMAC, the permittee shall comply with the proposed permit conditions in Enclosure 1 of the application until the Department issues the final permit modification P100R2M1.

Regardless of whether or not an application has been deemed to be complete, if the Department determines that additional information is necessary to evaluate the application or to take final

action, it may request such information in writing and set a reasonable deadline for a response.

In accordance with 20.2.70 NMAC, Section 402.A.1, within five (5) days from the date of receipt of this letter, the applicant shall provide a copy of the complete permit application (including the compliance plan and all additional materials submitted to the Department) directly to EPA. EPA Region 6 requests you not send a paper copy, but a Compact Disk (CD) containing a searchable PDF of the word/excel application and scanned PDF maps, etc. Please verify accuracy and completeness of the enclosed 'Permit Transmittal Form' and attach two copies of the form to the application package and send to EPA Region-6 address given below:

Chief, Air Permits
US EPA Region-6, 6PD-R
1445 Ross Avenue, Suite 1200
Dallas, TX 75202-2733

Please note that we will not issue your operating permit until you inform the Department that you have sent the application package to EPA.

20.2.70 NMAC Section 401 requires the Department to provide thirty (30) days for public and affected programs comment. When the draft permit becomes available, the Department will publish a legal notice in a regional daily newspaper and mail letters to concerned citizens and affected programs to accomplish this purpose. The Department may hold a public hearing. The Department will determine the time, date, and place of any hearing and will give notice of the hearing to the applicant and the public.

If you have any questions, please call me in Santa Fe at 505-476-4322.

Sincerely,

Kirby Olson

ENCLOSURE 4

August 1, 2016, email from Ms. Olson (NMED) to Mr. Blankenship (LANS) RE: LANL evaporators - Need approval to operate for Groundwater Bureau

EPC-DO-16-228

LA-UR-16-25934

Date: AUG 1 1 2016

From: Olson, Kirby, NMENV
To: Blankenship, Bill
Cc: Hardison, Cember, NMENV
Subject: RE: LANL evaporators - Need approval to operate for Groundwater Bureau
Date: Monday, August 01, 2016 4:13:19 PM

Hi Bill,

Please let the groundwater contact know that in the Title V Operating Permits regulation section 20.2.70.404.B(6) NMAC (which I've reproduced below), it states that changes proposed in a minor modification can be made after the application is ruled complete. The third paragraph of the completeness letter states "Therefore, as allowed under 20.2.70.404.B(6) NMAC, the permittee shall comply with the proposed permit conditions in Enclosure 1 of the application until the Department issues the final permit modification P100R2M1." That language was intended as the authorization to operate under the proposed conditions.

If the Groundwater Bureau person would like to discuss the situation further directly with AQB, we'd be happy to talk with them. Please have them contact my manager Cember Hardison at (505) 476-4346

Air Quality regulation: 20.2.70.404 PERMIT MODIFICATIONS:

B. Minor Permit Modifications:

(6) The permittee may make the change proposed in its minor permit modification application immediately after such application is deemed complete. After the permittee makes the change allowed by the preceding sentence, and until the Department takes any of the actions specified in paragraph (7) of subsection B of 20.2.70.404 NMAC below, the permittee must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the permittee need not comply with the existing permit terms and conditions it seeks to modify. If the permittee fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.
Regards,

Kirby

From: Blankenship, Bill [mailto:bblankenship@lanl.gov]
Sent: Monday, August 01, 2016 3:36 PM
To: Olson, Kirby, NMENV <Kirby.Olson@state.nm.us>
Subject: LANL evaporators - Need approval to operate for Groundwater Bureau

Kirby –

Our groundwater expert spoke with the NMED Groundwater Bureau contact regarding the SMI Model 120 evaporators and the Title V minor modification process. He also sent to NMED the application completeness determination dated July 26, 2016 and discussed it with him. Although it

is abundantly clear to all of us working on the air quality issues these many weeks that 2.70 NMAC – Operating Permits allows the commencement of operation once the application is ruled complete, the completeness letter does not state this. Thus, the NMED groundwater contact has requested in writing from NMED- Air Quality that the (5) evaporators in the application are now allowed to operate. An e-mail is sufficient if you could please respond, and I will sent it along.

Thanks.

Bill
