

OFFICE MEMORANDUM

TO : S. E. Russo, Group Leader, ENG-3

DATE: February 18, 1970

FROM : Jack W. Aeby, H-6

SUBJECT: CONTAMINATION SURVEY: TA-49 STRUCTURES

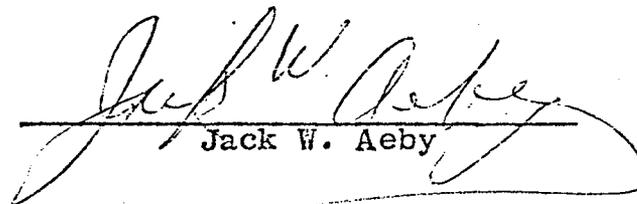

SYMBOL : H-6

1483
7A 49
A number of soil samples were taken in the vicinity of the seven structures referred to in your memo dated February 16, 1970.

None of the samples had greater than normally expected background amounts of alpha, beta or gamma emitters. It is therefore concluded that under present conditions there exists no environmental hazard in this area.

We were unable to locate the french drain which served the Change House TA-49-15, but assume that the deeper soils surrounding this disposal field will be highly contaminated. This disposal field should be located, clearly marked and left undisturbed.

Jack W. Aeby
