**Re: TES X Work Assignment No. R06031 - Los Alamos National Laboratory
Field Oversight Report**

Dear Ms. Driscoll:

Please find enclosed Metcalf & Eddy's (M&E) Field Oversight Report of oversight and split sampling activities conducted between November 16 through 24, 1993, and February 28 through March 22, 1994 at Los Alamos National Laboratory (LANL). Split samples were collected from Technical Area 54 and 49 (TA-54 and TA-49). This report provides a summary of oversight activities, daily summaries, copies of field log books, tables correlating M&E's split samples numbers with LANL sample numbers, photographs, and chain-of-custody records. A video tape of TA-49 split sampling activities photographed by LANL personnel will be provided under separate cover.

Split sample analytical data of samples collected from TA-49 will be submitted to EPA during the week of April 25, 1994. M&E will not be able to conduct data validation of this data under this Work Assignment (Task 2.7 of Work Plan) since the TES X Contract with EPA will have expired by this time. In addition M&E cannot conduct, Task 2.9, Sampling Comparison Report, due to the expiration of the TES X Contract.

Please call me if you have any questions regarding this report.

Sincerely,

Andrew B. Ellison
Contract Project Manager
