Subject: MDA C Phase II - 50-A Borehole Location

Hi Katie,

We have encountered an access issue with a Phase II MDA C borehole (50-A) located southwest of MDA C. After the CMRR parking lot construction activities were completed (directly south of MDA C), the southern access road that we had intended to use to access 50-A was graded and a drainage was created to channel water into a temporary storage pond. In order to move the drilling equipment to this location, a new access road will need to be constructed south of the parking lot which will involve crossing several small drainage channels. These changes would likely damage the existing erosion controls that were established after the parking lot was constructed. To avoid this problem and to reduce the impact from erosion, I would like to move the borehole location approximately 125 ft east of the approved work plan location. This alternate location is on the edge of the new parking lot which will make it easier to access and will provide long term stabilization and control. It will also accommodate year round access for future sample collection activities.

I've included a map with the alternative location indicated. Could you please let me know as soon as possible if this new location is acceptable? Thank you for your consideration of this request.
