Subject: Request for additional Disposal Wells in Area C

Would you please see that the following work is performed:

1. Locate positions for thirty disposal wells. I suggest that these run in a line, east to west, along the south edge of pit #3 in this area. The wells should be spaced at least eight feet apart.
2. These wells are to be two feet in diameter and twenty four feet in depth. This depth may be only 15 feet if it is too difficult to go to 24'.
3. Locate and ~~drill~~ one well, four feet in diameter and twenty four feet in depth, at the west end of existing disposal wells. This well should be at least ten feet from the nearest hole(#55).

It is my understanding that a survey has to be made to locate the positions of these wells by Mr. Russo's group. It will be necessary for them to contact this office for entry into this Area.
