SUBJECT: REQUEST FOR NEW ENTRANCE AND ROAD TO WASTE DISPOSAL SITE, AREA C

SYMBOL: H-1

The Waste Disposal Site, Area C, is used for disposal of beta-gamma active wastes. Recently this area was surveyed by ENG-3 and the positions of additional waste disposal wells were determined. To reach these wells it is necessary to drive down between two of the old pits; this road is narrow and when wet the large trucks have difficulty in getting into the area. A new entrance to the area is needed. To provide this entrance it will be necessary to make a turn-off from Pajarito road, provide some method of crossing the existing ditch, and install a gate in the fence. Also the road into the well area must be surfaced (type to be decided by Engineering) to prevent the large transport truck and the cement mix truck from getting stuck during wet weather.

The proposed location of this road and gate is shown on the map of the area prepared by ENG-3.
