

OFFICE MEMORANDUM

John Enders, H-1 Section Leader

DATE: 3-27-68

Gerald Eagan, H-1

SUBJECT: Cement capping of Disposal Wells at Area "G"

CONTROL: H-1-CMR

1530
TA 50
The purpose of this memo is to inform you that Mr. C.O. Martinez and myself have capped three disposal wells with cement.

The holes that were capped are: hole #93 at Area "C"; hole #5 and hole #6 at Area "G". Twenty bags of cement were used in the operation. The operation took approximately eight man hours. (Two men four hours) Some of this time was used to repair the equipment and to move the equipment from area "C" to area "G".

Holes #3 and #4 are full and ready to be capped at area "G", but we used all the cement that was on hand. (It will take a minimum of 12 more bags to cap these holes.)

It is suggested that a set of "Allen" wrenches be taken to area "G" the next time there is a capping operation to repair the cement mixer. (The drive pulley started to slipp just as we completed the operation.)

It may serve some purpose to mention that the Onan Motor-Generator set started very easily and performed excellently. (It is thought that the previous starting trouble was the fault of the operators and not the Onan M-G set.)
