Re: Controlled Air Incinerator Trial Burn

Dear Mr. Drypolcher:

As we discussed informally on August 11, 1986, EID has some concerns about LANL's plan to incinerate the remaining carbon tetrachloride waste upon completion of the trial burn. We recommend that LANL store the residual waste until the destruction efficiency for the CAI is confirmed to be 99.99% for carbontetrachloride. If LANL feels they must burn the residual, we recommend that the secondary combustion chamber be adjusted to 2000 degrees for the burn.

If you have any questions, please call me at 827-2923.

Sincerely,

C. Kelley Crossman
Environmental Scientist
