

Dear Mr. Mitzelfelt,

June 26, 1989

I understand you are involved in the very impactful decision regarding the burning of radioactive waste at Los Alamos Labs. I am appalled to find out the labs have an exemption to allow them to burn in an unregulated manner. Please do what you can to halt this. I realize we must deal with the fact of life of nuclear fecal matter. Let's handle it with at least the same respect as natural human waste.

I implore regulation of this process. I demanded the EID issue an emergency restraining order to prevent burning prior to regulation.

Sincerely,

David Dumar →
