Mr. Gallagher:

It is my best personal and professional perception that the Los Alamos National Laboratory incinerators pose as serious public health threat to the inhabitants of Santa Fe and a much broader area of New Mexico.

From the information that I have been able to review, there is no *bona fide* evidence for what constitutes safe emissions from such an incinerator. That kind of situation treats the public as guinea pigs, and brings up possibilities of consequences that could make your dreams a horror.

From the depths of my conscience as a doctor and a citizen, I implore you and the EPA to do all in your power to stop all burning of toxic and radioactive waste at the LANL incinerators.

Thank you.

Sincerely,

Dr. Celeste Skardis
