SUBJECT: NOTIFICATION OF FIELD UNIT 5 SAMPLING AT TECHNICAL AREAS (TAs) 51 AND 54 WEST

Dear Barbara:

Beginning on or about November 27, 1995, Field Unit 5 will start field characterization activities of septic tanks and seepage systems at TA-51 and 54 west. These activities are described in the Work Plan for Operable Unit 1148, which was approved in November 1993.

Potential release sites to be sampled include 51-001 (septic tank and seepage pit), and 54-007(c), (d), and (e) (septic tanks and seepage trenches). Approximately 12 sludge and 15 soil samples (not including Quality Assurance required samples) will be collected and submitted under Environmental Restoration chain-of-custody for pesticides/polychlorinated biphenyls, cyanide, gross alpha, beta, and gamma, volatile organic compounds, semi-volatile organic compounds, and metals analyses.

A Readiness Review was conducted on November 2, 1995, and all requirements in support of this activity have been satisfied. If you have any questions or concerns, please give me a call at (505) 667-0819.

Sincerely,

David McInroy
Environmental Restoration Project
