ADDITIONAL CLASSIFIED DISPOSAL SHAFT, AREA H

SP-2

ENC-50

[Handwritten signature]

1463
TA-54

It is requested that one additional classified disposal shaft be constructed at Materials Waste Pit, Area H.

Of the three shafts located in this area, SP-2 has completely filled two of them and is presently using the third.

The following points of information should be noted:

1. The new shaft should be identical to the ones already in existence - 6' in diameter and 60' deep. The security lid presently in use fits the six foot diameter shaft. The sixty foot dimension is not critical but has proven to be very useful.
2. The area is under the security locking system. Contact the SP-2 Group Office for keys.
3. Request that a plywood cover be provided for this new shaft since it will not be placed into use immediately upon construction. The previously used covers are located in the northwest corner of this area; however, they are badly weathered and may not be desirable.
4. A gravel surface for backing and turning trucks should be extended beyond the location of this shaft for approximately twenty feet.

It is requested that ENJ-3 be contacted for the exact location of the shaft within this area.
