

OFFICE MEMORANDUM

TO : David Curtis, H-8, MS-490

DATE: May 5, 1976

FROM : Margaret Anne Rogers, H-8 *MAR*

SUBJECT : ANALYSIS OF TWELVE SOIL SAMPLES TAKEN DURING THE AUGERING
OF SHAFT 150, AREA G

SYMBOL : H8-WM-595

*1537
TA 54*
Twelve soil samples were collected at five foot intervals during the augering of Shaft 150, Area G on May 3, 1976. This shaft is located near the western fence of Area G south of Trench A.

I wish to have the samples (#6766-#6777) analyzed for tritium. It is very unlikely anything above background levels for tritium will be found since there have not been any tritium disposals in the vicinity of Shaft 150.
