Subject: RE: Completion Report for Pore-Gas Monitoring System Boreholes at MDA H

Neelam

In response to your question below, I wanted to let you know that the bentonite seals above and below each sampling interval were hydrated as required by the August 2009 Work Plan.

As we discussed on the phone, the preliminary electronic data from the 1Q-FY2010 sampling at MDA H will be provided by February 12, 2010. LANL will also include, in a separate e-mail, the calculations and a brief discussion of the total inventory of VOCs in the subsurface pore gas at MDA H. As additional pore gas data is collected from the new and re-configured vapor-monitoring wells, the Conceptual Site Model will be evaluated and refined as appropriate.

The 1Q-FY2010 Periodic Monitoring Report for MDA H will be submitted on April 15, 2010.

If you have any questions, please do not hesitate to call. Thanks.

Subject: Completion Report for Pore-Gas Monitoring System Boreholes at MDA H

Jarrett

I'm reviewing the Completion Report for Pore-Gas Monitoring System Boreholes at Material Disposal Area H, dated December 2009. Section 7.2 describes well construction activities but it does not say if bentonite seals above and below each sampling interval were hydrated as required by the approved Work Plan (August 2009). I would appreciate clarification of this issue.

Thanks, Neelam
