Subject: Class 2 Permit Modification Request for TA-54-38

Comment Period

Dear Dave,

I really cannot think of a good reason why i would want even more hazardous waste stored at a seismically unstable site upstream from me. The request for permit modification suggests that LANL intends to produce even more toxic byproducts when the ones produced over the past 75 years have not been converted to safe or useful substances. When LANL demonstrates that it can do that (create a recycling process), then i might reconsider my opposition to waste storage at LANL. If in our quest to "protect" ourselves from foreign aggressors we endanger our own health and safety, i'd say we've shot ourselves in the foot. If we preach nuclear nonproliferation to the rest of the world while continuing to amass weapons of mass destruction, i'd say we're asking to be defrocked.

So my request to the NMED is to deny this permit modification.

Thanks for your consideration!
