All

Just a quick notification that LANL has been directed to stop work on the TA 73 Drainage IM project by DOE. This occurred some time ago and though we've discussed it in the HPT meetings I thought we should formalize it somewhat via this email. I'm sorry it's taken so long for me to think of doing this.

For the time being, DOE has elected to take management responsibility for this aspect of the phased VCM for the Airport Landfill PRSs. I would encourage you to contact David Gregory at OLASO for any further information you might need. I would ask though that you continue to copy LANL with any correspondence regarding the IM so we can remain current should management of the project shift in the future.

I'll follow this email with a formal letter reiterating the situation.

Thanks

tr
