ADMINISTRATIVE COMPLETENESS REVIEW  
MELROSE AIR FORCE RANGE

The following are minor deficiencies found in review of the September 1993 Part B Permit Application:

1. Access Control - Distance to passenger railway (This was identified in the December 1990 Part B Permit Application) 270.14(b)(19)
2. Closure Plan - Estimate of maximum inventory during the life of the facility and estimated year of closure (No operational life was given other than, "...at the time of base closure") 264.112(b)(13)
3. Closure Plan - Criteria for determining clean-up levels for explosive residues (metals were identified to be cleaned up to background) 264.112(b)(4)

Recommendation: This Part B Permit Application is superior to any other dealing with Open Detonation. These few items could be addressed under the technical review. Proceed with fee billing.
