JUDITH M. ESPINOSA
SECRETARY

RON CURRY
DEPUTY SECRETARY

January 27, 1993

Mr. Ron Johnson
Public Service Company of New Mexico
Alvarado Square
Albuquerque, NM 87158

Dear Mr. Johnson,

This letter is in response to Public Service Company of New Mexico (PNM)'s request to modify PNM's Sampling and Analysis Plan at Person Generating Station for analytical method requirements. After review of the SW-846 Methods 601/8010 and 8240, we approve substitution of 601/8010 for 8240.

Also, regarding the issue of HRMB approval of proposed monitoring well locations discussed in our meeting January 25, 1993, the CAD states on the third page of Attachment B that location of monitoring wells will be subject to HRMB approval (attached). Prior to drilling, PNM must obtain this approval. We would also like the opportunity to review your planned well construction, drilling methods and the like.

In the past you have FAXed aerial photo maps to us showing proposed locations of monitoring wells. We would like this procedure continued for the proposed deep monitoring wells we discussed in our January 25, 1993 meeting in order to document approval. We would like at least one week notice prior to drilling.

If you have any questions or comments, please contact Jane Cramer of my staff at 827-4313.

Sincerely,

A handwritten signature in cursive script, appearing to read "Ed Horst".

Ed Horst, Program Manager

Hazardous & Radioactive Materials Bureau

- 7) Quick turnaround laboratory analysis for PCE, TCA and DCE will be used to determine proper second phase well placements. Full SW-846 Method 8240 analysis will also be performed on each well in duplicate (approximately one week between sampling) for analysis per requirements of the groundwater assessment plan.

Location of above wells will be subject to HRMB approval.
