525 Camino de Los Marquez
Santa Fe, NM 87502

Dear Ms. Davis:

Subject: Geophysical Well Logs, Cluster Wells,
Person Generating Station, NMT360010342

Enclosed please find one copy each of geophysical well logs performed on PSMW-17-Cluster, PSMW-19-Cluster, and PSMW-22-Cluster. You requested copies of these logs during your site visit on April 7, 1994. All loggings were conducted by Southwest Geophysical Services, Inc.

Also enclosed is a table of screened intervals for each of the cluster wells. The tables show the location of screens for each well reference to ground level. Differences in ground level elevation will have to be corrected for in order to closely compare each well log. The approximate ground elevations for each cluster well are as follows:

PSMW-17-Cluster:	5072 feet
PSMW-19-Cluster:	5116 feet
PSMW-22-Cluster:	5107 feet

If you have any questions, please feel free to contact me at 848-2998.

Sincerely,

Ron D. Johnson
Sr. Environmental Scientist
