**RE: Request to Terminate Corrective Action and Post Closure Care Activities at the RCRA Cap
- Person Generating Station (NMT 360010342)**

Dear Mr. Warder:

Public Service Company of New Mexico (PNM) is requesting New Mexico Environment Department (NMED) approval to terminate RCRA corrective action and post-closure care responsibilities associated with the RCRA cap (closure cover) and the underlying soil at the Person Generating Station.

Soil and soil vapor sampling activities were conducted pursuant to Volume III, Section 6 of the RCRA permit renewal application document for the Person Generating Station, submitted to the NMED in March 1998. Review of the analytical data indicates that soil concentrations of the parameters of concern are significantly less than the applicable remediation standards. Therefore, as described in the above referenced section, PNM is requesting NMED approval to terminate corrective action and post-closure care activities associated with the RCRA cap and underlying soil, and to remove the RCRA concrete cap at a later date.

In support of this request, enclosed is one copy of the following report: Soil and Vapor Sampling Beneath the RCRA Cap at Person Generating Station. A copy of this letter and one additional report have also been mailed to your Santa Fe office.

If you have any questions, please contact me at (505) 855-6392.

Sincerely,

John Hale, P.E.
Technical Project Manager
