I'm still looking into the issue of disposal of your purge water from the monitoring wells. The guidance on Investigation Derived Waste (IDW) is somewhat limited, so I'm investigating how to do a "contained-in" determination that would allow you to dispose of purge water "below an appropriate risk-based level" at the well sites. This would be in addition to the NOI that you would need to obtain from the Ground Water Quality Bureau. We should also discuss whether disposing of the purge water on site may create areas of contamination in the subsurface soil that may cause problems later. I expect we should be able to resolve this prior to your next round of sampling of the monitoring wells. Please give me a call if you want to discuss any of these issues further while I'm looking into them.
