Permit Section Coordinator

Subject: Used Solvent Storage Tank System  
at the Safety-Kleen Service Center  
in Albuquerque, New Mexico

Dear Dr. Grover:

Submitted here is a pre-final draft of our installation assessment report for the underground used solvent storage tank systems at your Albuquerque facility. The main body of the report summarizes the results of our assessment in a format corresponding to the rules being addressed. Appendices are used for presenting detailed information.

This draft documents the tank system installation through last Friday, February 21, 1992. It is submitted in compliance with the agreement we came to during our meeting that day at the job site. You may recall that, on that date it was anticipated that the final operational tests of the leak detection and high level alarm systems wouldn't be accomplished until Friday, February 28th, the same day that our final report is due in your office. So, you granted my request to submit a draft by February 28th, with three copies of the final report to be submitted by Friday, March 6, 1992 containing documentation of these operational tests.

The pre-final draft accompanying this letter is essentially complete, except for our observation of the operational tests and a few photographs of the finished installation, which we plan to do the first part of next week.

We appreciate the extension and wish to assure you that, barring some extraordinary unforeseen delay, our final report will be in your hands by March 6th.

Very truly yours,  
TERA, Inc.

Robert C. Speake, B.E.  
Senior Engineer
