Report on Shelf

Re: Results of additional Assessment Activities, Safety-Kleen Corp. Service Center (2720 Girard NE), Albuquerque, New Mexico

Dear Mr. Brown:

Safety-Kleen Corp. (S-K) has completed additional subsurface assessment activities in the vicinity of the old underground storage tanks (UST) and return/fill station at the service center in Albuquerque, New Mexico. The additional soil boring, sampling and field screening program was completed in general accordance with our letter dated January 14, 1992. Results of the additional assessment activities are summarized in the attachment report (2 copies).

The old USTs and return/fill station were removed from service in March, 1992. S-K is in the process of revising a RCRA partial facility closure plan for submittal to the New Mexico Environmental Department (NMED). S-K will be submitting the closure plan in accordance with a letter from Mr. Edward Horst (RCRA Program Manager) dated February 24, 1992 on May 8, 1992. The old USTs and return/fill station will be closed following NMED review and approval of the partial facility closure plan.

If you have any questions or need additional information, please feel free to contact me at (310) 831-3903.

Sincerely,
Safety-Kleen Corp.
