RE: Waste Minimization Report for 2018
Albuquerque Branch
Safety-Kleen Systems, Inc., EPA ID # NMD000804294
2720 Girard NE, Albuquerque, NM 87107

Dear Manager:

Enclosed is the Waste Minimization Report for 2018 as required by Part 2, Condition 2.5 of the facility's RCRA Part B Permit.

If you have any questions, feel free to contact me at 714-429-4355.

Sincerely,

A handwritten signature in cursive script that reads 'Nahid Toossi'.

Enclosures : 2018 Waste Minimization Report

cc: File 2020

Annual Waste Minimization Report

Safety-Kleen Systems, Inc.
Albuquerque, NM

EPA ID Number. NMD000804294

The Safety-Kleen Albuquerque Service Center implements and maintains a Waste Minimization Plan to minimize the amount and toxicity of hazardous wastes generated at this facility to a degree economically practicable, and that the method utilized for the treatment, storage, or disposal of hazardous waste is the practicable method currently available to this facility which minimizes the present and future threat to human health and the environment. The Plan includes:

1. Sections 3 and 4 of the Waste Minimization Plan address reducing the volume and toxicity of hazardous waste and the recycling of hazardous waste.
2. Section 5.3 of the Waste Minimization Plan addresses Employee training to identify and implement source reduction and recycling opportunities. In addition Attachment A of the Plan includes a Waste Minimization Suggestion Submittal Form to encourage employees to submit ideas to management.
3. Section 9.2 of the Waste Minimization Plan addresses minimization and recycling implemented over the last year and Section 9.3 addresses additional waste efforts that could be implemented at the facility next year.
4. Section 9.5 of the Waste Minimization Plan addresses costs associated to waste minimization and recycling of hazardous waste.

As described in the Plan, the wastes that appear on shipping documents as if they have been generated by Safety-Kleen, are actually generated by customers of Safety-Kleen. These wastes are stored in tanks and/or in containers and subsequently shipped off site to other facilities. Safety-Kleen relies mostly on source reduction for on-site processes that may generate waste, such as washing the parts washer drums returning from customers, the use of re-usable metal filters rather than disposable, and segregation of more toxic wastes from less toxic wastes to reduce the toxicity of larger quantity waste streams. Waste generated by Safety-Kleen year over year is directly related to the volume of customer generation. See matrix below.

Hazardous Waste Generation Matrix

Location	Description of Waste	Pounds Generated 2017 (January 1 to December 1, 2018)	Pounds Generated 2018 (January 1 to September 30, 2018)
Return and Fill Station	Hazardous Waste Debris	1,100	2,124
	Drum Washer Sediment		
Warehouse	Used oil retain samples	550	1,650
Total		1,650	3,774
