RE: Safety-Kleen Corp. Permit Class I Modification--Farmington, New Mexico Service
Center--EPA ID NMD980698849

Dear Mr. Englert:

This submittal constitutes notice of a Class I permit modification as required under 40 CFR 270.42(a). The Part B permit for the subject facility has been modified to delete all references to the colors of the containers. The permit application on which the permit is based describes the drums as being color-coded to indicate their contents. However, it has been proven to be logistically unfeasible to adhere to the same color schemes for the duration of the permit. Information on the contents of the drums can also be obtained from the "Hazardous Waste" labels on the drums so this change will not affect Safety-Kleen's ability to segregate wastes or determine the contents of a given container. You should note that Safety-Kleen will continue to color code the drums for different wastes; however, the colors may change periodically.

Safety-Kleen has determined that this is a Class I modification according to modification A.3 in Appendix I of 40 CFR 270.42, equipment replacement with functionally equivalent components and modification A.1 in Appendix I, 40 CFR 270.42 because this is also an administrative change. In accordance with Class I permit modification procedures, Safety-Kleen Corp. is

13112.00\01\DE112191.B

Mr. Dave Englert
