CERTIFIED MAIL-RETURN RECEIPT REQUESTED

James Bearzi, Chief
New Mexico Environment Department
Hazardous Waste Bureau
2905 Rodeo Park Drive East, Bldg. 1
Santa Fe, NM 87505

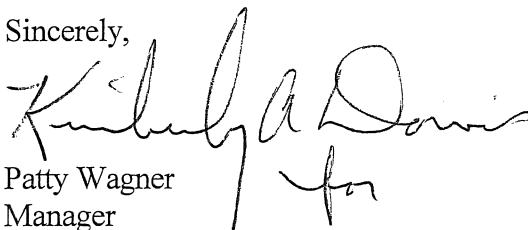

Subject: December 2010 Consolidated Quarterly Report for the Environmental Restoration Project

Dear Mr. Bearzi:

On behalf of the Department of Energy/National Nuclear Security Administration (DOE/NNSA) and Sandia Corporation, DOE/NNSA is submitting the December 2010 Consolidated Quarterly Report for the Environmental Restoration Project that addresses all quarterly reporting (from August through October 2010) required under the *"Hazardous and Solid Waste Amendments Module of the Resource Conservation and Recovery Act Permit, the Compliance Order on Consent and the Chemical Waste Landfill (CWL) Closure Plan"* for Sandia National Laboratories/New Mexico, Environmental Protection Agency No. 5890110518.

Should you have any questions regarding this correspondence, please feel free to contact me at (505) 845-6036 or Joe Estrada of my staff at (505) 845-5326. For perchlorate or CWL groundwater related items, please contact John Gould of my staff at (505) 845-6089.

Sincerely,

Patty Wagner
Manager

CERTIFICATION STATEMENT FOR APPROVAL AND FINAL RELEASE OF DOCUMENTS

Document title: Environmental Restoration Project Consolidated Quarterly
Report, December 2010

Document author: John Cochran, Department 06234

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment for knowing violations.

United States Department of Energy
Sandia Site Office

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation,
a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's
National Nuclear Security Administration under contract DE-AC04-94AL85000.

CONSOLIDATED QUARTERLY REPORT

December 2010

SANDIA NATIONAL LABORATORIES, NEW MEXICO (SNL/NM)

ENVIRONMENTAL RESTORATION PROJECT

U.S. DEPARTMENT OF ENERGY (DOE):	SANDIA SITE OFFICE
CONTRACTOR:	SANDIA CORPORATION
PROJECT MANAGER:	John Cochran

NUMBER OF POTENTIAL RELEASE SITES SUBJECT TO THIS PERMIT: 36

SUSPECT WASTE: Radionuclides, metals, organic compounds, and explosives

OVERVIEW

This Consolidated Quarterly Report for the SNL/NM Environmental Restoration Project addresses all quarterly reporting requirements pertaining to the Hazardous and Solid Waste Amendments Module of the Resource Conservation and Recovery Act Permit, the Compliance Order on Consent, and the Chemical Waste Landfill Closure Plan. The following entities and reporting periods are addressed as follows:

SECTION I

Environmental Restoration Project Quarterly Report, reporting period:
August through October 2010

SECTION II

Chemical Waste Landfill Progress Report, reporting period:
August through October 2010

SECTION III

Perchlorate Screening Semiannual Report, reporting period:
July through September 2010

ABBREVIATIONS AND ACRONYMS

AOC	Area of Concern
BSG	Burn Site Groundwater
BW	background well
CAC	Corrective Action Complete
CAMU	Corrective Action Management Unit
CFR	Code of Federal Regulations
CME	Corrective Measures Evaluation
CMI	Corrective Measures Implementation
COA	certificates of analyses
CSS	CWL sanitary sewer
CWL	Chemical Waste Landfill
CY	Calendar Year
CYN	Canyons (Burn Site)
DO	dissolved oxygen
DOE	U.S. Department of Energy
EPA	U.S. Environmental Protection Agency
ER	Environmental Restoration
ET	evapotranspirative
FOP	Field Operating Procedure
GEL	GEL Laboratories, LLC
GWPP	Groundwater Protection Program
HI	hazard index
HQ	hazard quotient
HWMF	Hazardous Waste Management Facility
lbs	pounds
LE	Landfill Excavation
LTES	Long-Term Environmental Stewardship
LWDS	Liquid Waste Disposal System
MDL	method detection limit
µg/L	microgram per liter
MW	monitoring well
MWL	Mixed Waste Landfill
ND	nondetect
NMED	New Mexico Environment Department
NOD	Notice of Disapproval
ORP	oxidation-reduction potential
pH	potential of hydrogen

PPE	personal protective equipment
QC	quality control
RCRA	Resource Conservation and Recovery Act
Sandia	Sandia Corporation
SAP	Sampling and Analysis Plan
SC	specific conductance
SNL/NM	Sandia National Laboratories, New Mexico
SWMU	Solid Waste Management Unit
TA	Technical Area
TAG	Tijeras Arroyo Groundwater
TSCA	Toxic Substances Control Act
VCM	Voluntary Corrective Measure
VZMS	Vadose Zone Monitoring System

SECTION I

ENVIRONMENTAL RESTORATION CONSOLIDATED QUARTERLY REPORT

1.0 Introduction

This Environmental Restoration Consolidated Quarterly Report (ER Quarterly Report) discusses ongoing corrective actions being implemented by the Sandia National Laboratories, New Mexico (SNL/NM) Environmental Restoration (ER) Project. The status of regulatory closure activities is outlined in the following sections. In this section, “the Quarter” refers to the August through October 2010 quarterly reporting period.

2.0 ER Work Completed

2.1 Mixed Waste Landfill Investigation Activities

- In April 2010, the U.S. Department of Energy and Sandia Corporation (DOE/Sandia) received a letter from the New Mexico Environment Department (NMED) entitled, “Toluene Detections in Groundwater,” requiring further investigation to determine the source of toluene in the groundwater samples collected from monitoring wells at the Mixed Waste Landfill (MWL) (NMED April 2010a). As part of the investigation, the NMED required conducting a purging/sampling study of the groundwater as well as any other studies necessary to determine the toluene source (NMED April 2010a). DOE/Sandia submitted the MWL Toluene Investigation Report in August 2010 (SNL/NM August 2010) and received a Notice of Disapproval (NOD) with two comments from the NMED in September 2010 (NMED September 2010). The DOE/Sandia NOD response was submitted in October 2010 (SNL/NM October 2010) and included a revised version of the report.
- Groundwater monitoring activities at the MWL for the fourth quarter of Fiscal Year 2010 were completed in early July 2010. The July sampling event included quarterly sampling of MWL-BW2, MWL-MW7, MWL-MW8, and MWL-MW9. The requirement for eight consecutive quarters of groundwater sampling at MWL-BW2, MWL-MW7, MWL-MW8, and MWL-MW9 has been completed, and the sampling frequency for all existing MWL monitoring wells will be annual hereafter in accordance with Table XI-1 of the Compliance Order on Consent (NMED April 2004). All Calendar Year (CY) 2010 groundwater monitoring results will be presented in the MWL Annual Groundwater Monitoring Report for CY 2010 (anticipated delivery to the NMED by spring 2011).

2.2 **Project Management and Site Closure**

ER sites undergoing regulatory and administrative closure activities are presently addressed under project management. Two permit modification requests are currently in progress with the NMED and are summarized in this section. The sites, listed in Section 2.2.1, were discussed with the NMED and public stakeholders in June 2009 as part of the comment resolution process for the renewal of the SNL/NM Resource Conservation and Recovery Act (RCRA) Permit. The NMED verbally outlined their decisions about these sites at this meeting. In April 2010, DOE/Sandia received official written communication from the NMED regarding their decisions on these sites (NMED April 2010b). The decisions, presented in the NMED letter dated April 8, 2010, are summarized in this section.

2.2.1 **Permit Modification Request Submitted in March 2006**

- Twenty-six sites were submitted to the NMED for the final determination of Corrective Action Complete (CAC) in March 2006. The sites included 19 Solid Waste Management Units (SWMUs) and 7 Areas of Concern (AOCs). The NMED issued a Notice of Public Comment Period and Intent to Approve a Class 3 Permit Modification of the RCRA Permit for SNL/NM for these 26 sites in December 2007 (NMED December 2007). The NMED public review and comment period ended in February 2008. The SWMUs and AOCs included in this permit modification request are listed as follows:
 - SWMUs 4, 5, 46, 49, 52, 68, 91, 101, 116, 138, 140, 147, 149, 150, 154, 161, 196, 233, and 234
 - AOCs 1090, 1094, 1095, 1114, 1115, 1116, and 1117

2.2.2 **Permit Modification Request Submitted in January 2008**

- Five sites were submitted for the final regulatory determination of CAC in a permit modification request in January 2008 (Wagner January 2008). This permit modification included all remaining SNL/NM ER sites with the exception of three active sites (SWMUs 83, 84, and 240), three groundwater investigation sites (Tijeras Arroyo, Technical Area [TA]-V, and Burn Site), and the MWL (SWMU 76). The final report of the Corrective Measures Implementation (CMI) for the MWL was submitted in January 2010 (SNL/NM January 2010) and is pending NMED approval. The MWL is addressed separately in Section 2.1 of this ER Quarterly Report. The four SWMUs and one AOC included in the January 2008 permit modification request are listed as follows:

- SWMUs 8, 28-2, 58, and 105
- AOC 1101

2.2.3 **Status of Permit Modification Requests Submitted in March 2006 and January 2008**

- In April 2010, DOE/Sandia received a letter from the NMED entitled, “Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (Request of March 1, 2006) and 5 Other SWMUs/AOCs (Request of January 7, 2008), Sandia National Laboratories, EPA ID# NM5890110518, HWB-SNL-06-007 and HWB-SNL-08-001” (NMED April 2010b). This letter included four main sections: “SWMUs Requiring Corrective Action,” “SWMUs/AOCs to be Subject to Groundwater Monitoring Controls,” “SWMUs/AOCs to be Restricted to Industrial Land Use,” and “SWMUs/AOCs that do not Require Corrective Action.” The NMED requirements stated in this letter are summarized as follows:
 - The section titled, “SWMUs Requiring Corrective Action,” specifies additional characterization requirements for SNL/NM SWMUs 68 (Old Burn Site), 149 (Building 9930 Septic System), 154 (Building 9960 Septic System and Seepage Pits), and 8/58 (Open Dump [Coyote Canyon Blast Area]/Coyote Canyon Blast Area). Activities associated with these requirements are summarized in Section 2.3 of this ER Quarterly Report.
 - The section titled, “SWMUs/AOCs to be Subject to Groundwater Monitoring Controls,” specifies that annual groundwater monitoring is to be conducted at SWMUs 49 and 116.
 - The section titled, “SWMUs/AOCs to be Restricted to Industrial Land Use,” indicates that the NMED intends to restrict the future land use of the following SWMUs/AOCs to industrial:
 1. SWMU 4 – Liquid Waste Disposal System Surface Impoundments
 2. SWMU 46 – Old Acid Waste Line Outfall
 3. SWMU 196 – Building 6597 Cistern (Technical Area [TA]-V)
 4. SWMU 234 – Storm Drain System Outfall
 5. AOC 1090 – Building 6721 Septic System (TA-III)

- The section titled, “SWMUs/AOCs that do not Require Corrective Action,” includes the following SWMUs/AOCs:

1. SWMU 4 – Liquid Waste Disposal System Surface Impoundments
2. SWMU 5 – Liquid Waste Disposal System Drainfield
3. SWMU 28-2 – Mine Shaft
4. SWMU 46 – Old Acid Waste Line Outfall
5. SWMU 49 – Building 9820 Drains (Lurance Canyon)
6. SWMU 91 – Lead Firing Site
7. SWMU 101 – Building 9926/9926A Septic System and Seepage Pit (Coyote Test Field)
8. SWMU 105 – Mercury Spill (Building 6536)
9. SWMU 116 – Building 9990 Septic System (Coyote Test Field)
10. SWMU 138 – Building 6630 Septic Systems (TA-III)
11. SWMU 140 – Building 9965 Septic System and Drywell (Thunder Range)
12. SWMU 147 – Building 9925 Septic Systems (Coyote Test Field)
13. SWMU 150 – Building 9939/9939A Septic System and Drainfield (Coyote Test Field)
14. SWMU 161 – Building 6636 Septic System (TA-III)
15. SWMU 196 – Building 6597 Cistern (TA-V)
16. SWMU 233 – Storm Drain System Outfall
17. SWMU 234 – Storm Drain System Outfall
18. AOC 1090 – Building 6721 Septic System (TA-III)
19. AOC 1094 – Live Fire Range East Septic System (Lurance Canyon)
20. AOC 1095 – Building 9938 Seepage Pit (Coyote Test Field)
21. AOC 1101 – Building 885 Septic System
22. AOC 1114 – Building 9978 Drywell (Coyote Test Field)
23. AOC 1115 – Former Offices Septic System (Solar Tower Complex)
24. AOC 1116 – Building 9981A Seepage Pit (Solar Tower Complex)
25. AOC 1117 – Building 9982 Drywell (Solar Tower Complex)

2.3 **Site-Wide Hydrogeologic Characterization**

The following sections provide site-wide hydrogeological characterization activities at three groundwater investigation sites, the Chemical Waste Landfill (CWL), and the 5 SWMU's subject to groundwater monitoring controls as discussed in Section 2.2 of this ER Quarterly Report.

2.3.1 **Technical Area III/V Groundwater**

- Groundwater sampling in TA-III/V was completed in August and September 2010. Analytical results will be discussed in the CY 2010 Groundwater Protection Program (GWPP) Annual Groundwater Monitoring Report (anticipated submittal to the NMED in summer 2011).

- In October 2010, DOE/Sandia began implementing the work plan attached to the DOE/Sandia response to the NMED's third NOD on the TA-V Corrective Measures Evaluation (CME) Report (SNL/NM July 2005).

2.3.2 **Burn Site Groundwater**

- Groundwater sampling for the Burn Site Groundwater (BSG) was completed in September 2010. Results of perchlorate analysis are discussed in Section III of this ER Quarterly Report, and other analytical results will be discussed in the CY 2010 GWPP Annual Groundwater Monitoring Report (anticipated submittal to the NMED in summer 2011).
- In August 2010, DOE/Sandia began preparing a report describing the fieldwork performed in accordance with the BSG Characterization Work Plan.

2.3.3 **Tijeras Arroyo Groundwater**

- Groundwater sampling for the Tijeras Arroyo Groundwater (TAG) investigation was completed in August 2010. Results of perchlorate analysis are discussed in Section III of this ER Quarterly Report, and other analytical results will be discussed in the CY 2010 GWPP Annual Groundwater Monitoring Report (anticipated submittal to the NMED in summer 2011).

2.3.4 **Mixed Waste Landfill Groundwater**

- No MWL groundwater monitoring activities were performed during this reporting period (August through October 2010). The final CY 2010 groundwater sampling event at the MWL was performed in July 2010. Results from all CY 2010 groundwater sampling events will be presented in the MWL Annual Groundwater Monitoring Report for CY 2010 (anticipated submittal to the NMED in early 2011).

2.3.5 **Chemical Waste Landfill Groundwater**

- No CWL groundwater monitoring activities were performed during this reporting period (August through October 2010).
- Land surveying and final reporting for the four new groundwater monitoring wells (CWL-BW5, CWL-MW9, CWL-MW10, and CWL-MW11) installed in June 2010 and the four groundwater monitoring wells decommissioned at that time (CWL-BW4A, CWL-MW4, CWL-MW5U/L, and CWL-MW6U/L) were completed during August and

September 2010, respectively. The Well Installation and Decommissioning Report was included as Appendix F of the Final RCRA Closure Report (SNL/NM September 2010a) submitted to the NMED on September 27, 2010, in accordance with the requirements of the CWL Closure Plan (NMED October 2009).

2.3.6 **SWMUs 8/58 Groundwater**

- In September, DOE/Sandia submitted to the NMED a “Groundwater Characterization Work Plan for SWMU 8 – Open Dump (Coyote Canyon Blast Area) and SWMU 58 – Coyote Canyon Blast Area, Foothills Test Area,” as Attachment B to *SWMU 68 and SWMUs 8/58 Groundwater Characterization Work Plans –DOE/Sandia Responses to the New Mexico Environment Department Letter of April 8, 2010 entitled, “Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (request of March 1, 2006) and 5 Other SWMUs/AOCs (request of January 7, 2008)”* (SNL/NM September 2010b).

2.3.7 **SWMU 68 Groundwater**

- In September, DOE/Sandia submitted to the NMED a “Groundwater Characterization Work Plan for SWMU 68, Old Burn Site,” as Attachment A to *SWMU 68 and SWMUs 8/58 Groundwater Characterization Work Plans –DOE/Sandia Responses to the New Mexico Environment Department Letter of April 8, 2010 entitled, “Class 3 Permit Modification Requests for Granting Corrective Action Complete Status for 26 SWMUs/AOCs (request of March 1, 2006) and 5 Other SWMUs/AOCs (request of January 7, 2008)”* (SNL/NM September 2010b).

2.3.8 **SWMU 149 Groundwater**

No groundwater monitoring activities were performed at SWMU 149 during this reporting period (August through October 2010).

2.3.9 **SWMU 154 Groundwater**

No groundwater monitoring activities were performed at SWMU 154 during this reporting period (August through October 2010).

2.4 **ER Documents Submitted to the NMED Pending Regulatory Review and Approval**

The following section lists the documents that have been submitted to the NMED that as of this reporting period are still pending approval.

- The TA-V Groundwater CME Work Plan was submitted to the NMED on May 11, 2004 (SNL/NM April 2004).
- The BSG Interim Measures Work Plan was submitted to the NMED on May 26, 2005 (SNL/NM May 2005).
- The CME Report for the TAG Investigation was submitted to the NMED on September 1, 2005 (SNL/NM August 2005).
- The BSG CME Work Plan was submitted to the NMED on April 9, 2008 (SNL/NM March 2008a).
- The BSG Current Conceptual Model of Groundwater Flow and Contaminant Transport was submitted to the NMED on April 9, 2008 (SNL/NM March 2008b).
- The MWL CMI Report was submitted to the NMED on January 26, 2010 (SNL/NM January 2010).
- A Sampling and Analysis Plan (SAP) for Monitoring Well CTF-MW2 located near SWMU 154 was submitted to the NMED on June 24, 2010 (SNL/NM June 2010).
- A SAP for Monitoring Well CTF-MW3 located near SWMU 149 was submitted to the NMED on June 24, 2010 (SNL/NM June 2010).
- The MWL Toluene Investigation Report was submitted to the NMED on August 18, 2010 (SNL/NM August 2010). DOE/Sandia submitted the response to the NMED NOD on September 23, 2010 (SNL/NM October 2010), with a revised MWL Toluene Investigation Report (SNL/NM October 2010).
- The CWL Final RCRA Closure Report was submitted to the NMED on September 27, 2010 (SNL/NM September 2010a)

3.0 **Long-Term Environmental Stewardship/ER Work Completed this Quarter**

3.1 **Corrective Action Management Unit**

Corrective Action Management Unit (CAMU) post-closure care operations consist of vadose-zone monitoring, leachate removal, and post-closure inspections, as required in the Post-Closure Care Permit. Activities for this reporting period include the following:

- Weekly pumping of leachate from the leachate collection and removal system.
- Weekly inspection of the less-than-90-day accumulation area.
- Quarterly inspection of the site was performed on September 21, 2010, that included the containment cell cover, storm water diversion structures, security fences, gates, signs, and benchmarks:
 - During site inspection activities, 18 four-wing saltbush plants were identified growing on the cover. Because these plants can develop extensive root systems that could damage the high-density polyethylene fabric that is part of the cover system, they were removed on October 29, 2010.
 - On November 22, 2010, a request was submitted to SNL/NM Facilities for the removal of tumbleweeds and excess vegetation around the containment cell.
- Quarterly monitoring of the Vadose Zone Monitoring System (VZMS) was conducted in September 2010. The results will be presented in the 2011 CAMU VZMS Annual Monitoring Results report (anticipated submittal to the NMED in September 2011). Waste management associated with the leachate collection and removal system was conducted and is outlined in Section 3.1.2.
- Composite leachate sampling for waste characterization was conducted on August 31, 2010.
- Additional nonroutine activities performed during this reporting period include installing a liner in the sanitary sewer line that parallels the east side of the CAMU containment cell at a distance of approximately 50 feet. Installation was completed on September 1, 2010. The newly installed liner will prevent leakage from the CWL sanitary sewer (CSS) that might affect soil moisture levels at the CSS-1 through CSS-6 monitoring locations.

In September 2005 it was first noticed that soil moisture values were increasing at the CSS-2 12- and 16-foot monitoring depths. The increased values below the CSS line indicated that a leak might exist in the sanitary sewer line near the CSS-2 location (SNL/NM September 2007). Soil moisture values have increased at the CSS-3 12-foot depth since March 2007 and have remained stable at the 16-foot depth (SNL/NM September 2009). Soil moisture values have currently stabilized at both CSS-2 and CSS-3 monitoring locations. Future quarterly soil moisture monitoring of the CSS locations will monitor the effectiveness of the liner.

3.1.1 **Previous CAMU Waste Management Activities – Corrections for the May through July 2010 Reporting Period**

Reporting errors for CAMU Waste Management Activities were identified in the September 2010 ER Quarterly Report. The corrected waste management data for this previous reporting period (May through July 2010) is reported as follows:

- Waste stored on site at the beginning of this period:
 - 131 gallons of leachate
 - 2 gallons of rinsate
 - 2 pounds (lbs) personal protective equipment (PPE)
- Waste generated on-site during the period:
 - 114 gallons of leachate
 - 2 gallons of rinsate
 - 5 lbs PPE, paper wipes, plastic drum pump
- Waste removed from the site by the Hazardous Waste Management Facility (HWMF):
 - 109 gallons of leachate on May 3, 2010
 - 93 gallons of leachate on June 30, 2010
 - 4 gallons of rinsate on June 30, 2010
 - 5 lbs PPE, paper wipes, plastic drum pump on June 30, 2010
- Waste remaining on site at the end of this period:
 - 43 gallons of leachate
 - 0 gallons of rinsate
 - 2 lbs PPE

3.1.2 **CAMU Waste Management Activities – August through October Reporting Period**

During the reporting period (August through October 2010), the following waste management data for the CAMU were reported:

- Waste stored on site at the beginning of this period:
 - 43 gallons of leachate
 - 0 gallons of rinsate
 - 2 lbs PPE
- Waste generated on-site during the period:
 - 125 gallons of leachate
 - 2 gallons of rinsate
 - 5 lbs PPE, paper wipes, plastic drum pump
- Waste removed from the site by the HWMF:
 - 85 gallons of leachate on September 7, 2010
 - 2 gallons of rinsate on September 7, 2010
 - 5 lbs PPE, paper wipes, plastic drum pump on September 7, 2010
- Waste remaining on site at the end of this period:
 - 83 gallons of leachate
 - 0 gallons of rinsate
 - 2 lbs PPE

3.1.3 **CAMU Regulatory Activities**

The 2010 CAMU VZMS Annual Monitoring Results Report was submitted to the NMED on September 23, 2010 (SNL/NM September 2010c).

3.2 **Solid Waste Management Unit 81: Long-Term Environmental Stewardship Site 1, Cable Debris Site**

In August, 2010, the NMED issued a Notice of Approval for the Investigation Report and Proposal for Corrective Action Complete; Long-Term Environmental Stewardship (LTES) Site 1 Cable Debris Site (NMED August 2010).

3.3 **LTES Site Documents Submitted to the NMED Pending Regulatory Review and Approval**

No LTES Site documents submitted to the NMED are pending regulatory review and approval.

SECTION II

CHEMICAL WASTE LANDFILL QUARTERLY PROGRESS REPORT

This Quarterly Closure Progress Report for the Sandia National Laboratories, New Mexico Chemical Waste Landfill (CWL) has been prepared pursuant to the CWL Final Closure Plan and Post-Closure Care Permit Application (Closure Plan) (SNL/NM December 1992). This section documents activities at the CWL for the reporting period from August through October 2010. No groundwater sampling events occurred at the CWL during this reporting period.

1.0 Introduction

All Voluntary Corrective Measure (VCM) activities for the CWL have been completed. The CWL Landfill Excavation (LE) VCM Final Report was submitted to the New Mexico Environment Department (NMED) in April 2003 (SNL/NM April 2003) and approved by the NMED in December 2003 (Moats December 2003). The Site Operational Boundary Closure Addendum to the LE VCM Final Report was submitted to the NMED in August 2005 (SNL/NM August 2005) and approved by the NMED on October 25, 2005 (Bearzi October 2005). With the submittal of the Waste Management Addendum to the LE VCM Final Report in the February 22, 2006 CWL Quarterly Closure Progress Report (SNL/NM February 2006) as Appendix B, all LE VCM regulatory deliverables have been submitted. With the completion of the VCMs, technical meetings will be held on an as-needed basis. The public will continue to be informed of significant events through the Environmental Restoration Project public meeting process.

Installation of the cover as an interim measure was requested in April 2004 (Wagner April 2004) and approved with conditions in September 2004 (Kielling September 2004). The cover was completed in September 2005 in accordance with the conditions of approval. All field activities have been completed at the CWL, including the installation of new groundwater monitoring wells CWL-BW5, CWL-MW9, CWL-MW10, and CWL-MW11 and decommissioning of groundwater monitoring wells CWL-BW4A, CWL-MW4, MW5U/L, and MW6U/L. Long-term monitoring under the NMED-approved CWL Post-Closure Care Permit (NMED October 2009a) will commence after NMED approval of final closure.

2.0 **Status of Closure**

The Final Toxic Substances Control Act (TSCA) Closure Report documents the completion of all closure activities specified in the “Risk-Based Approval Request, 40 CFR [Code of Federal Regulations] 761.61(c) Risk-Based Method for Management of PCB [Polychlorinated Biphenyl] Materials” (SNL/NM October 2001), approved by the U.S. Environmental Protection Agency (EPA) in June 2002 (Cooke June 2002). The Final TSCA Closure Report was submitted to the EPA and NMED on November 2, 2006 (SNL/NM November 2006).

The Final Resource Conservation and Recovery Act (RCRA) Closure Report documenting closure in accordance with all CWL Closure Plan requirements was submitted to the NMED on September 27, 2010. The required 40 CFR 265.116 (survey plat) and 40 CFR 265.119 (notation on property deed) notices were submitted to the Bernalillo County Zoning Commission and County Clerk, respectively, as well as the NMED in early September 2010 in accordance with the Closure Plan. These notices were also included as an appendix in the Final RCRA Closure Report (SNL/NM September 2010), which documents the backfilling of the former CWL, installation of the at-grade evapotranspirative (ET) cover, ET cover revegetation activities, installation of the four new groundwater monitoring wells, and the final end-state conditions and cumulative risk assessment.

Fieldwork associated with the installation of the four new groundwater monitoring wells (CWL-BW5, CWL-MW9, CWL-MW10, and CWL-MW11) and decommissioning of groundwater monitoring wells CWL-BW4A, CWL-MW4, CWL-MW5U/L, and CWL-MW6U/L was completed in August 2010 with the final land survey of the new wells. The Well Installation and Decommissioning Report was submitted as an appendix of the Final RCRA Closure Report, in accordance with the requirements of the CWL Closure Plan.

All required closure actions have now been completed in accordance with the CWL Closure Plan and the 2008 through 2009 negotiations that covered the CWL Closure Plan Amendment As Changed (revisions to Chapter 12 and to Appendix G), the CWL Post-Closure Care Permit, and the CWL Corrective Measures Study Report and Final Remedy. These negotiations were completed on October 15, 2009, and documented in the settlement agreement and Final Order In the Matter of Application for a Post-Closure Care Hazardous Waste Permit for the Chemical Waste Landfill, Sandia National Laboratories No. NM5890110518 (Final Order) (NMED October 2009a), which also included the final Post-Closure Care Permit. The NMED issued a “Notice of Approval, Final Remedy and Closure Plan Amendment, Chemical Waste Landfill” on October 16, 2009 (NMED October 2009b). The October 16, 2009, NMED approval included the final versions of two revisions

to the Closure Plan that were part of the Closure Plan Amendment as Changed; Chapter 12; and Appendix G, Revision 4, Section 1.0.

3.0 **Groundwater and Soil-Gas Monitoring**

No CWL groundwater monitoring activities were performed for the reporting period from August through October 2010.

No soil-gas sampling was performed at the CWL during this reporting period. Soil-gas sampling is not required under the Closure Plan but will be a requirement under the CWL Post-Closure Care Permit (NMED October 2009a).

4.0 **Projected Activities for the Upcoming Quarter**

The CWL ET Cover maintenance will be performed in November to remove undesired annual plant species, including Russian thistle and four-wing saltbush.

After NMED approval of the Final RCRA Closure Report, the Closure Plan will no longer be in effect, and the CWL Post-Closure Care Permit (NMED October 2009a) will become the sole source of operating conditions.

SECTION III

PERCHLORATE SCREENING QUARTERLY MONITORING REPORT, THIRD QUARTER CALENDAR YEAR 2010 (JULY, AUGUST, AND SEPTEMBER 2010)

EXECUTIVE SUMMARY

Section IV.B of the Compliance Order on Consent (the Order), between the New Mexico Environment Department (NMED), the U.S. Department of Energy (DOE), and Sandia Corporation (Sandia) for Sandia National Laboratories, New Mexico, effective on April 29, 2004, stipulates that a select group of groundwater monitoring wells be sampled for perchlorate at SNL/NM (NMED April 2004). This report summarizes the perchlorate monitoring completed during the third quarter of Calendar Year (CY) 2010 (July, August, and September 2010) in response to the requirements of the Order. During the third quarter of CY 2010, groundwater samples were collected from CYN-MW6, CYN-MW9, CYN-MW10, CYN-MW11, CYN-MW12, and TA1-W-03.

CYN-MW6 is one of the 11 wells in the Burn Site Groundwater (BSG) monitoring well network and has been sampled for perchlorate 15 times. CYN-MW9, CYN-MW10, CYN-MW11, and CYN-MW12 are recently installed BSG monitoring wells that were sampled for the first time. TA1-W-03 is located in the Tijeras Arroyo Groundwater Investigation study area and was required to be sampled for perchlorate based on NMED requirements (NMED April 2009). This well was sampled for the third time during this reporting period.

All samples were submitted to GEL Laboratories, LLC for perchlorate analysis using U.S. Environmental Protection Agency Method 314.0 (EPA November 1999). No perchlorate was detected in the environmental samples from CYN-MW9, CYN-MW10, CYN-MW11, CYN-MW12, or TA1-W-03 at a method detection limit of 4 micrograms per liter. In September 2010, the environmental sample from CYN-MW6 revealed perchlorate at a concentration of 6.14 µg/L. The source for the perchlorate in the groundwater at CYN-MW6 is unknown, although a natural source may be present.

Because perchlorate concentrations in monitoring well CYN-MW6 have exceeded the screening level since March 2006, DOE/Sandia had initiated a negotiation process with the NMED (SNL/NM March 2007) to determine the frequency of continued monitoring. In November 2008, DOE/Sandia received approval from the NMED to discontinue quarterly monitoring and proceed with semiannual sampling for perchlorate at CYN-MW6 (NMED November 2008).

SECTION III

PERCHLORATE SCREENING QUARTERLY MONITORING REPORT, THIRD QUARTER CALENDAR YEAR 2010 (JULY, AUGUST, AND SEPTEMBER 2010)

1.0 Introduction

Section IV.B of the Compliance Order on Consent (the Order), between the New Mexico Environment Department (NMED), the U.S. Department of Energy (DOE), and Sandia Corporation (Sandia) for Sandia National Laboratories, New Mexico (SNL/NM), effective on April 29, 2004, stipulates that a select group of groundwater monitoring wells be sampled for perchlorate at SNL/NM (NMED April 2004). This report summarizes the perchlorate screening monitoring completed during the third quarter of Calendar Year (CY) 2010 (July, August, and September 2010) in response to the requirements of the Order. The outline of this report is based on the required elements of a “Periodic Monitoring Report” described in Section X.D. of the Order (NMED April 2004).

In November 2005, DOE/Sandia submitted a letter report on the status of perchlorate screening in groundwater at SNL/NM monitoring wells (SNL/NM November 2005). The purpose of the letter report was to summarize previous correspondence and sampling results and to outline proposed future work to comply with NMED requirements for perchlorate screening in groundwater. As specified in the letter report, quarterly reports will be submitted for wells active in the perchlorate-screening monitoring well network.

Based on the NMED response (NMED January 2006), DOE/Sandia will submit each quarterly report within 90 days following the quarter that the data represent. In November 2008, DOE/Sandia received approval from the NMED to proceed to semiannual reporting (NMED November 2008); however, upon further consideration, the NMED once more required quarterly reporting (NMED April 2009). This did not alter the previously negotiated frequency for CYN-MW6, an existing Burn Site Groundwater (BSG) study area well that has been under the sampling and reporting requirements of the Order since the well was installed, and which will remain at a semiannual frequency for sampling and reporting.

This report is the nineteenth to be submitted since the November 2005 letter report; the previous reports were submitted for Fourth Quarter of CY 2005 through the Second Quarter of CY 2010 (SNL/NM February 2006, June 2006, September 2006, December 2006, March 2007, June 2007, September 2007, December 2007, March 2008, June 2008, September 2008, December 2008, June 2009, September 2009, December 2009, March 2010, June 2010a, and September 2010).

Groundwater sampling for well CYN-MW6 has now been done 15 times; Tijeras Arroyo Groundwater (TAG) well TA1-W-03 has been sampled for three consecutive quarters; and BSG wells CYN-MW9, CYN-MW10, CYN-MW11, and CYN-MW12 have been sampled once (Figure 1). The Order requires that new wells be sampled for perchlorate for a minimum of four quarters (NMED April 2004). Reporting will continue as long as groundwater monitoring wells remain active in the perchlorate-screening monitoring well network unless negotiated otherwise with the NMED.

2.0 **Scope of Activities**

This report provides perchlorate screening results for the third quarter of CY 2010 (July, August, and September 2010) for the wells currently active in the perchlorate-screening program as shown in Figure 1 and listed in Table 1. It should be noted that CYN-MW6 is currently being sampled on a semiannual basis, and all other wells are being sampled quarterly. In accordance with the requirements of Table XI-1 of the Order, a well with four consecutive quarters of nondetects (NDs) at the screening level/method detection limit (MDL) of 4 micrograms per liter ($\mu\text{g/L}$) is removed from the requirement of continued monitoring for perchlorate. Data from numerous wells identified in the Order have satisfied this requirement; therefore, these wells have been removed from the perchlorate-screening program. Data for these wells were provided in previous reports and are not discussed in this current report. Wells discussed in previous perchlorate-screening reports include the following: CYN-MW1D, CYN-MW5, CYN-MW7, CYN-MW8, LWDS-MW1, MRN-2, MRN-3D, MWL-BW1, MWL-BW2, MWL-MW1, MWL-MW7, MWL-MW8, MWL-MW9, NWT A3-MW2, SWTA3-MW4, TA1-W-06, TA1-W-08, TA2-W-01, and TA2-W-27.

DOE/Sandia performed groundwater sampling at six wells on the dates listed in Table 1. CYN-MW6, CYN-MW9, CYN-MW10, CYN-MW11, and CYN-MW12 were installed after the Order was finalized and were therefore required to be sampled for perchlorate as a “new” well; sampling at TA1-W-03 was specifically required by the NMED’s April 2009 letter (NMED April 2009). Groundwater sampling activities were conducted in conformance with procedures outlined in the investigation-specific sampling and analysis plans (SAPs) entitled:

- “Tijeras Arroyo Groundwater Investigation, Mini-SAP for FY10, 4th Quarter Sampling, July/August 2010” (SNL/NM June 2010b), and
- “Burn Site Groundwater Monitoring, Mini-SAP for Fourth Quarter, Fiscal Year 2010” (SNL/NM August 2010).

Current Perchlorate-Screening Monitoring Well Network
Third Quarter, CY 2010
(July, August, and September 2010)

Well	Date Sampled	Number of Consecutive Sampling Events ^a	Remaining Number of Sampling Events ^b	Sampling Equipment
CYN-MW6	20-Sep-2010	15	TBD ^c	Bennett TM Pump
CYN-MW9	28-Sep-2010	1	3	Bennett TM Pump
CYN-MW10	27-Sep-2010	1	3	Bennett TM Pump
CYN-MW11	29-Sep-2010	1	3	Bennett TM Pump
CYN-MW12	23-Sep-2010	1	3	Bennett TM Pump
TA1-W-03	22-Jul-2010	3	1	Bennett TM Pump

Notes

^a Includes this sampling event.

^b Per the requirements of Table XI-1 of the Order (NMED April 2004), a well will be removed from the perchlorate-screening monitoring well network after four quarters unless perchlorate is detected above the screening level/MDL of 4 µg/L. If perchlorate is detected above the screening level/MDL in a specific well, monitoring will continue at that well at a frequency negotiated with the NMED.

^c TBD = To be determined. This well has been sampled for the required initial four quarters. Because perchlorate concentrations in this well have exceeded the screening level, DOE/Sandia and the NMED have agreed to further characterization requirements in the BSG study area (NMED February 2010).

As described in the Mini-SAPs, groundwater sampling was performed in conformance with current SNL/NM Environmental Management, Long-Term Environmental Stewardship (LTES) Project field operating procedures (FOPs). A portable BennettTM groundwater sampling system was used to collect the groundwater samples. The sampling pump and tubing bundle were decontaminated prior to installation into monitoring wells in accordance with procedures described in FOP 05-03, "LTES Groundwater Sampling Equipment Decontamination" (SNL/NM August 2007a). Wells CYN-MW9, CYN-MW10, CYN-MW11, CYN-MW12, and TA1-W-03 were purged a minimum of one saturated screen volume before sampling in conformance with FOP 05-01, "LTES Groundwater Monitoring Well Sampling and Field Analytical Measurements" (SNL/NM August 2007b). Well CYN-MW6 is a low-yield monitoring well and was purged dry and allowed to recover before sampling to ensure a representative groundwater sample.

Field water-quality measurements for turbidity, potential of hydrogen (pH), temperature, specific conductance (SC), oxidation-reduction potential (ORP), and dissolved oxygen (DO) were obtained from the well prior to collecting groundwater samples. Groundwater temperature, SC, ORP, DO, and pH were measured with a YSITM Model 620 Water Quality Meter. Turbidity was measured with a HACHTM Model 2100P turbidity meter. Purging continued until four stable measurements for turbidity, pH, temperature, and SC were obtained. Groundwater stability is considered acceptable when:

- Turbidity measurements are within 10 percent, or less than 5 nephelometric turbidity units (NTUs)
- pH is within 0.1 units
- Temperature is within 1.0 degrees Celsius
- SC is within 5 percent

Field Measurement Logs documenting details of well purging and water quality measurements have been submitted to the SNL/NM Customer Funded Records Center.

The groundwater samples were submitted to GEL Laboratories, LLC (GEL) for chemical analysis for perchlorate using U.S. Environmental Protection Agency Method 314.0 (EPA November 1999). The sample identification, Analysis Request/Chain-of-Custody (AR/COC) form number, and the associated groundwater investigation are provided in Table 2. The analytical report from GEL, including certificates of analyses (COA) (Appendix A), analytical methods, MDLs, practical quantitation limits, dates of analyses, results of quality control (QC) analyses, and data validation findings (Appendix B) have been submitted to the SNL/NM Customer Funded Records Center.

Notes

AR/COC = Analysis request/chain of custody.
BSG = Burn Site Groundwater.
TAG = Tijeras Arroyo Groundwater.

3.0 **Regulatory Criteria**

In a given monitoring well, four consecutive NDs using the screening level/MDL of 4 µg/L are considered by the NMED to be evidence of the absence of perchlorate, such that additional monitoring for perchlorate in that well is not required. If perchlorate is detected using the screening level/MDL of 4 µg/L in a specific well, then monitoring will continue at that well at a frequency negotiated with the NMED. The Order (NMED April 2004) also requires that for detections equal to or greater than 4 µg/L, the DOE/Sandia will evaluate the nature and extent of perchlorate contamination, based on a screening level/MDL of 4 µg/L, and requires that the results of this evaluation be incorporated into a Corrective Measures Evaluation (CME). Section VII.C of the Order clarifies that the CME process will be initiated where there was a release to the environment and where corrective measures are necessary to protect human health or the environment.

In March 2007, DOE/Sandia received a letter from the NMED stating the requirement that DOE/Sandia “determine the nature and extent of the contamination and complete a Corrective Measures Evaluation for the perchlorate-impacted groundwater in the vicinity of CYN-MW6” (NMED March 2007). As this was based solely on the four quarters of monitoring results, DOE/Sandia submitted a letter to the NMED in April 2007 (SNL/NM April 2007) that recommended further characterization through continued quarterly monitoring of CYN-MW6 for four additional quarters, ending in December 2007, to ensure

appropriate characterization of this well. In January 2008, DOE/Sandia requested a meeting with the NMED to discuss the need for continued monitoring or additional characterization work, and potentially, a CME.

In preparation for discussing the perchlorate-impacted groundwater in the vicinity of CYN-MW6 and to show that the requirement “to determine the nature and extent of contamination” (NMED March 2007) has been met, DOE/Sandia provided supporting information to the NMED (SNL/NM March 2008). Perchlorate in surface soils has been characterized at Solid Waste Management Units in the study area (SNL/NM June 2006; SNL/NM March 2008–Appendix C). Based upon these data, DOE/Sandia consider that the nature and extent of perchlorate in groundwater at the Burn Site has been sufficiently characterized. Since 2004, four other monitoring wells in the vicinity of the Burn Site have been sampled and analyzed for perchlorate, including CYN-MW1D, CYN-MW5, CYN-MW7, and CYN-MW8. All of these wells were sampled for four quarters and all results were ND for perchlorate (SNL/NM March 2008–Appendix D).

According to the requirements of Section VI.K.1.b of the Order (NMED April 2004), a human health risk assessment has been performed to evaluate the potential for adverse health effects from the concentrations of perchlorate detected in CYN-MW6 groundwater (SNL/NM March 2008–Appendix E). The maximum concentration of perchlorate in CYN-MW6 to date (8.93 µg/L) was used in the assessment. The calculated hazard quotient (HQ) of 0.35 is less than the NMED target level of a hazard index (HI) (the sum of all HQs) of 1.0 (NMED June 2006).

Because perchlorate concentrations in monitoring well CYN-MW6 have exceeded the screening level, DOE/Sandia initiated a negotiation process with the NMED (SNL/NM March 2007) to determine the frequency of continued monitoring. In November 2008, DOE/Sandia received approval from the NMED to proceed with semiannual monitoring of perchlorate in CYN-MW6 and proceed with semiannual reporting of all perchlorate results (NMED November 2008). Upon further consideration, the NMED once more required that DOE/Sandia resume quarterly reporting of perchlorate results with the exception of CYN-MW6 (NMED April 2009).

In April 2009, DOE/Sandia received a letter from the NMED requiring DOE/Sandia to characterize the nature and extent of the perchlorate contamination in soil and groundwater in the BSG study area (NMED April 2009). A characterization work plan was prepared and submitted to the NMED (SNL/NM November 2009), approved by the NMED (NMED February 2010), and implemented in July 2010. In the April 2009 letter, the NMED had also requested that DOE/Sandia monitor perchlorate concentrations for a minimum of four quarters at several TAG and Technical Area V monitoring wells, including TA1-W-03 (NMED April 2009).

4.0 **Monitoring Results**

Table 3 summarizes current and historical perchlorate results for wells currently in the perchlorate-screening monitoring network. The analytical laboratory COA for the third quarter of CY 2010 perchlorate data is included as Appendix A. Perchlorate was not detected above the screening level in samples from CYN-MW9, CYN-MW10, CYN-MW11, and CYN-MW12. Consistent with historical analytical results, perchlorate was not detected above the screening level in the sample from TA1-W-03. Also consistent with historical analytical results, perchlorate was detected above the screening level/MDL in the sample from CYN-MW6. As shown in Figure 2, the concentration of perchlorate detected in the sample collected from CYN-MW6 in September 2010 (6.14 µg/L) is consistent with the average concentration found over the life of the well. The hydrograph of CYN-MW6 (Figure 3) shows that the water table is rapidly declining in this well.

Table 4 summarizes field water quality measurements collected immediately before the analytical sample was collected. Field water quality measurements include turbidity, pH, temperature, SC, ORP, and DO.

The analytical data were reviewed and qualified in accordance with Administrative Operating Procedure 00-03 Revision 2, “Data Validation Procedure for Chemical and Radiochemical Data” (SNL/NM July 2007). No problems were identified with the analytical data that resulted in qualification of the data as unusable. The data are acceptable, and reported QC measures are adequate. The data validation sample findings summary sheets for the perchlorate data are included as Appendix B.

No variances or nonconformances in field activities or field conditions from requirements in the groundwater monitoring mini-SAPs (SNL/NM June 2010b and August 2010) were identified during the third quarter of CY 2010 sampling activities.

Notes

^aResult

Values in **bold** exceed the screening level/MDL.

ND = Not detected (at method detection limit).

µg/L = Micrograms per liter.

^bMDL

Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero, analyte is matrix specific.

^cPQL

Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by the indicated method under routine laboratory operating conditions.

^dMCL

Maximum contaminant level. Established by the U.S. Environmental Protection Agency Primary Water Regulations [40 CFR 141.11(b)], and subsequent amendments or the New Mexico Environmental Improvement Board in Title 20, Chapter 7, Part 1 of the New Mexico Administrative Code (20.7.1 NMAC).

NE = Not established.

^eLaboratory Qualifier

H = Analytical holding time was exceeded.

h = Prep holding time was exceeded.

J = Amount detected is below the practical quantitation limit.

U = Analyte is absent or below the method detection limit.

Table 3 (concluded)
Summary of Perchlorate Screening Analytical Results for the
Current Monitoring Well Network as of Third Quarter, CY 2010

Notes (continued)

^fValidation Qualifier

If cell is blank, then all quality control samples meet acceptance criteria with respect to submitted samples and no qualifier was assigned.

HT = The holding time was exceeded for the associated sample analysis.

J = The associated value is an estimated quantity.

J- = The associated value is an estimated quantity with a suspected negative bias.

P2 = Insufficient quality control data to determine laboratory precision.

X1 = General data quality is suspect.

Notes

^aField measurements obtained immediately before the groundwater sample was collected.

°C = Degrees Celsius.

% Sat = Percent saturation.

µmho/cm = Micromhos per centimeter.

mg/L = Milligrams per liter.

mV = Millivolts.

NTU = Nephelometric turbidity units.

pH = Potential of hydrogen (negative logarithm of the hydrogen ion concentration).

5.0 **Summary and Conclusions**

Based on the analytical data presented in Table 3 and in previous reports, the following statements can be made:

- No perchlorate was detected in the environmental samples from groundwater monitoring wells CYN-MW9, CYN-MW10, CYN-MW11, CYN-MW12, and TA1-W-03 at the screening level/MDL of 4 µg/L.
- Since June 2004 (the start of sampling required by the Order), perchlorate has been detected above the screening level/MDL (4 µg/L) in samples from only one of the wells (CYN-MW6) in the perchlorate-screening monitoring well network.
- The analytical result for the sample from CYN-MW6 for the third quarter of CY 2010 sampling event (6.14 µg/L) is consistent with the average concentration reported since the inception of sampling for perchlorate at CYN-MW6 in March 2006 (Figure 2).
- A human health risk assessment has been performed to evaluate the potential for adverse health effects from the concentrations of perchlorate detected in groundwater samples from CYN-MW6 (SNL/NM March 2008). The maximum concentration of perchlorate in samples from CYN-MW6 to date (8.93 µg/L) was used in the assessment. The calculated HQ of 0.35 is less than the NMED target level of an HI (the sum of all HQs) of 1.0 (NMED June 2006).

DOE/Sandia will continue semiannual monitoring of perchlorate in CYN-MW6, and quarterly monitoring of perchlorate in CYN-MW9, CYN-MW10, CYN-MW11, CYN-MW12, and TA1-W-03.

Based on recent requirements (NMED April 2009), DOE/Sandia has prepared and submitted a work plan that describes efforts to characterize the nature and extent of the perchlorate contamination in soil and groundwater in the BSG study area. In February 2010, the NMED approved the work plan (NMED February 2010), and the activities described in the work plan were implemented during the summer of 2010, including installation of the four new BSG study area wells (CYN-MW9, CYN-MW10, CYN-MW11, and CYN-MW12).

Data Validation Sample Findings Summary Sheets for the Perchlorate Data

Memorandum

Date: September 2, 2010

To: File

From: Kevin Lambert

Subject: Inorganic Data Review and Validation – SNL
Site: Tijeras Arroyo GWM
AR/COC: 613167, 613169, 613170, and 613171
SDG: 256756
Laboratory: GEL
Project/Task: 146422.10.11.01
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Five samples were prepared and analyzed with accepted procedures using methods EPA 353.2 (nitrate/nitrite by Cd reduction), EPA 9056 (anions by Ion Chromatography), and SM 2320B (alkalinity). Three samples were prepared and analyzed with accepted procedures using methods EPA 314.0 (perchlorate). Data were reported for all required analytes. Problems were identified with the data package that results in the qualification of data.

1. Alkalinity:

Alkalinity was detected in the method blank (MB) at a concentration \geq the practical quantitation limit (PQL). The alkalinity result for sample 256756-020 was a detect $<5X$ the MB result and will be **qualified "7.9UJ,B"** at $5X$ the MB value (mg/L). The other associated sample results were detects $\geq 5X$ the MB result and will not be qualified.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

Alkalinity:

Alkalinity was detected in the equipment blank (EB), sample -020, associated with samples -029 and -037, at a concentration \geq the PQL. However, it should be noted that the alkalinity result for the EB has already been qualified non-detect due to MB contamination and, thus, does not affect the associated field sample results.

Nitrate/Nitrite:

Nitrate/Nitrite was detected in the EB, sample -021, associated with samples -030 and -038, at a concentration \geq the method detection limit (MDL) but $<$ the PQL. The associated sample result were detects $\geq 5X$ the EB result and will not be qualified.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria

Laboratory Replicate

The replicate met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported.

Ion Chromatography:

Samples -003 and -012 were diluted 5X for sulfate and samples -029 and -037 were diluted 25X for chloride and sulfate due to high concentration for this analysis.

Nitrate/Nitrite:

Samples -004, -013, and -021 were diluted 5X and samples -030 and -038 were diluted 25X due to high concentration for this analysis or matrix interference.

All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the sample that were $\leq 5X$. No sample data will be qualified as a result.

Other QC

EBs and a field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result.

No other specific issues that affect data quality were identified.

FROM: David Schwent

SUBJECT: General Chemistry Data Review and Validation - SNL
Site: Burn Site GWM
AR/COC(s): 613279, 613280, 613281, and 613282
SDG: 261121
Laboratory: GEL
Project/Task No: 146422.10.11.01

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

The samples were prepared and analyzed with accepted procedures using methods EPA 314.0 (perchlorate), EPA 353.2 (nitrate/nitrite by Cd reduction), EPA 9056 (anions by Ion Chromatography), and SM 2320B (alkalinity). No problems were identified with the data package that result in the qualification of data.

Data are acceptable. QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times/Preservation

All Analyses: All samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All Analyses: All initial and continuing calibration QC acceptance criteria were met.

Blanks

Nitrate/nitrite Analysis: No target analytes were detected in the blanks, except the following. Nitrate/nitrite was detected in the method blank (MB) at a concentration > the method detection limit (MDL) but ≤ the practical quantitation limit (PQL). All associated sample results were detects >5X the MB concentration and will not be qualified.

Alkalinity Analysis: No target analytes were detected in the blanks, except the following. Bicarbonate alkalinity was detected in the MB at a concentration $>$ the MDL but \leq the PQL. All associated sample results were detects $>5X$ the MB concentration and will not be qualified.

All Other Analyses: No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All Analyses: All LCS QC acceptance criteria were met.

Matrix Spike

All Analyses: All MS QC acceptance criteria were met.

Laboratory Replicates

All Analyses: All replicate QC acceptance criteria were met.

Detection Limits/Dilutions

Anions Analysis: All detection limits were properly reported. All samples were diluted either 5X or 10X for chloride and sulfate due to high concentrations of the target analytes. All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the samples that were $\leq 5X$. No sample data will be qualified as a result.

Nitrate/nitrite Analysis: All detection limits were properly reported. Sample 261121-007 was diluted 50X and all other samples were diluted either 25X for nitrate/nitrite due to high concentration of the target analyte. All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the samples that were $\leq 5X$. No sample data will be qualified as a result

All Other Analyses: All detection limits were properly reported. No samples required dilution

Other QC

All Analyses: No equipment blanks (EBs), field blanks (FBs), or field duplicates (FDs) were submitted on the AR/COC(s).

No other specific issues were identified that affect data quality.

Sample Findings Summary

AR/COC: 613279, 613280, 613281, 613282

Memorandum

Date: November 12, 2010

To: File

From: Kevin Lambert

Subject: Inorganic Data Review and Validation – SNL
Site: Burn Site GWM
AR/COC: 613283, 613284, 613285, and 613286
SDG: 261560
Laboratory: GEL
Project/Task: 146422.10.11.01
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Five samples were prepared and analyzed with accepted procedures using methods EPA 353.2 (nitrate/nitrite by Cd reduction), EPA 9056 (Anions by Ion Chromatography), EPA 314.0 (perchlorate), and SM 2320B (alkalinity). Data were reported for all required analytes. Problems were identified with the data package that results in the qualification of data.

1. Alkalinity:

Bicarbonate alkalinity was detected in the method blanks (MBs) at concentrations \geq the practical quantitation limit (PQL). The bicarbonate alkalinity result for sample 261560-021 was a detect $<5X$ the MB result and will be **qualified “7.8UJ,B”** at $5X$ the MB value (mg/L). The other associated sample results were detects $\geq 5X$ the MB result and will not be qualified.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

Anions by Ion Chromatography:

Chloride was detected in the equipment blank (EB), sample -021, associated with samples -036 and -050, at a concentration \geq the PQL. The associated sample results were detected $\geq 5X$ the EB result and will not be qualified.

Alkalinity:

Bicarbonate alkalinity was detected in the EB, sample -021, associated with samples -036 and -050, at a concentration \geq the PQL. However, it should be noted that the bicarbonate alkalinity result for the EB has already been qualified non-detect due to MB contamination and, thus, does not affect the associated field sample results.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Perchlorate:

It should be noted that the MS analyses were performed on a SNL sample from another SDG. No sample data will be qualified as a result.

Laboratory Replicate

The replicate met all QC acceptance criteria.

Perchlorate:

It should be noted that the replicate analyses were performed on a SNL sample from another SDG. No sample data will be qualified as a result.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted except as follows.

Nitrate/Nitrite:

Samples were diluted 5X, 25X and 50X due to high concentration or matrix interference.

All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the samples that were $\leq 5X$. No sample data will be qualified as a result.

Anions by Ion Chromatography:

Several samples were diluted 10X for chloride and sulfate due to high concentration for this analysis.

All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the sample that were $\leq 5X$. No sample data will be qualified as a result.

Other QC

EBs and a field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result.

No other specific issues that affect data quality were identified.
