Dear Sirs,

AVAT & Citizen Action has evidence that the monitoring wells of Sandia Labs were wrongly positioned; therefore, all decisions are being made on false tests, and wastes are already entering the aquifer.

Why is the MWL landfill allowed to continue so precariously in an unlined, unsealed dump? When EPA staff agree with our science, it is time to review now! and remediation immediately! It is a situation that cannot get better; as is sand more and more ABQ citizens are learning of the failures through multiple forums of Amigos Bravos WNM, Endangered Aquifer, Food + Water Watch, Cit. Action & other groups + organizations.

P.S. Please respond in writing. 

Your truly,

Carol W. Benson
