Sandia National Laboratories

Mixed Waste Landfill

Long-Term Monitoring and Maintenance Plan

Public Comment

City: Albuquerque, N. M.
Zip Code: 87108

I have been attending these meetings for more than 30 years long before there was a dirt cover put on the 14WL. The monitoring wells were defective and placed in wrong positions, for years. The EPA agreed with Inspection general report that the ground water protection system would not protect the ground water. ~~NMED~~ NMED approved a dirt cover in spite of this report. The waste should be encapsulated and put in concrete lined permanent constructions with permanent concrete cover.

Let's have a public Hearing where citizens can participate and have a ^{professional} recorder to put the results in a permanent archive.
I would like a written response from NMED about this request for a public Hearing.
