M E M O R A N D U M

To: Barbara Hoditschek, RCRA Permits Program Manager, HRMB  
From: Cornelius Amindyas, RCRA Permits Writer, HRMB *Amindyas 8/31/95*  
Subject: Meeting with Representatives of Gandy Marley Inc.  
Date: August 31, 1995

The purpose of the meeting was for Bob Sweeney and me to clarify to Gandy Marley (GMI), any part of the August 8, 1995 Notice of Deficiency (NOD) that the Hazardous and Radioactive Materials Bureau had sent to GMI. The technical NOD requested GMI to provide additional information that GMI had not included in their Part B permit application for the proposed Triassic Park hazardous waste treatment, storage, and disposal (TSD) facility.

GMI explained that from their experience in designing hazardous waste TSDs, the leachate collection system final design is normally done lastly after the geometry of the unit has been finalized. It was agreed that HRMB should make a permit condition which gives GMI a schedule/deadline about when a final design of the TSD drainage system should be submitted to HRMB.

At the end of the meeting GMI requested that a two weeks extension beyond the NOD deadline of September 14, 1995 be granted them to enable GMI compile and submit all data and drawings at the same time. GMI was asked to put their request in writing, and address it to the Program Manager, RCRA Permits for her decision regarding the request for extension.
