Diane - With regard to Montgomery Watson's 6/2/00 proposed wording re soil sampling spacing - this wording is acceptable to NMED with the following change:

"...Sampling at this rate will be performed based on a grid system, where 1 sample is taken within each 2,000 ft² grid...."

should be changed to read,

"...Sampling at this rate will be performed based on a grid system, where 1 sample will be taken at the center of each 2,000 ft² grid...."
