Pat,

Once more with the attachment.

Attached is the revised Vadose Zone Monitoring Module with more specific information regarding the additional monitoring wells. See Sections 7.1.2.a and 7.2.1.b for both deep and shallow well location information respectively (or 1.2.1.a and 1.2.1.b due to word processing limitations).

This e-mail is associated with a faxed map showing the same well locations. The map doesn't extend far enough to encompass boring locations WW-1 and PB-14 so it may need to be expanded slightly.

I'm proposing to substitute alternative vadose zone monitoring required by the Secretary for shallow wells VZMW-7, 8, and 9.

I'd like to propose a new well identification scheme; deep wells - VZMW-D1 through D10 with 9 and 10 used in association with boreholes WW-1 and PB-14, shallow wells - VZMW-S9 through S14 with 9 and 10 used in association with the respective deep holes, and for the very deep well - VZMW-VD15.

Thanks, Steve
