Dear Steve Zappe,

While the DOE's request to use digital radiography and computed tomography might be safer for the workers, the Sisters of Loretto oppose the request unless the following amendments are made first:

- 1) Use "slices" of 3 mm instead of 10 mm.
- 2) Test with a greater number of samples. Eight samples is not a significant number (only .001%).
I suggest at least 40 samples.
- 3) After the testing of more samples, another public meeting is held to review the test.

Thanks again for answering my questions before the last meeting.

Penelope McMullen
