Subject: WIPP Is Safe

The New Mexico Environmental Department does not need to protect us from the U.S. Department of Energy. WIPP is very safe and can accommodate whatever nuclear waste DoE wants to bury there.

Air pollution and global warming are serious problems, and nuclear power is part of the solution. By adding to the public's fear of everything nuclear, NMED encourages the use of coal and the air pollution, water pollution, and global warming coal-fired power plants cause.

You could do some real good by banning truck stops in cities -- or by forbidding truckers to leave their motors running for hours at truck stops.

Arsenic in water is another serious problem.
