SUMMARY COMMENTS FOR THE WATER LEVEL MEASUREMENTS FOR THE
MONTH OF JUNE 2010

1. The WIPP Hazardous Waste Facility Permit (Permit), Attachment L, Section L-4c (1) requires reporting of cumulative fluctuations noted in the Detection Monitoring Program (DMP) wells of more than two feet in the course of one year which are not attributable to site tests and subsequent stabilization. The Calendar Year 2009 Annual Site Environmental Report (ASER), will be submitted to the New Mexico Environment Department in compliance with Permit Condition V.J.2.c, and will summarize and discuss DMP water level changes greater than two feet for calendar year 2009. Changes in DMP well water levels greater than two feet for the current year, if any, are reported in the data sheet and will be discussed in the ASER for calendar year 2010.
2. Calculations used to derive water level and fresh water head elevations in Table 1:
 - Adjusted Depth to Water(ft) = Depth to Water from Measuring Point(ft) – Adjustment(ft)
 - Water Level(ft amsl) = Top of Surveyed Casing Elevation(ft amsl) – Adjusted Depth to Water(ft)
 - Column Height(ft) = Water Level(ft amsl) – Culebra Midpoint Elevation(ft amsl)
 - Fresh-water Head(ft amsl) = Specific Gravity x Column Height(ft) + Culebra Midpoint Elevation(ft amsl)
3. For production-injection packers (PIPs) installed on tubing or Water Quality Sampling Program wells with tubing access ports, an adjustment is necessary to reference the water level to the surveyed fixed permanent casing [Top of Casing(TOC)]. If the measuring point is above the TOC, the depth to water relative to TOC is less. If the measuring point is below the TOC, the depth to water relative to TOC is greater (ref: WP 02-EM1014, Rev 5).
4. Groundwater level measurements were not taken at wells H-02b1, H-04c, H-06c and H-08a due to Sandia National Laboratories testing and instrumentation activities.
