Subject: Submittal of Requested Volatile Organic Compound Monitoring Information

Reference: NMED correspondence from James P. Bearzi to David C. Moody and Farok M. Sharif, dated December 4, 2009, subject: Submittal of Corrected Volatile Organic Compound Information WIPP Hazardous Waste Facility Permit EPA I.D. Number NM4890139088

Dear Mr. Bearzi:

Enclosed is volatile organic compound (VOC) monitoring information which is the monthly update to information provided to the New Mexico Environment Department (NMED) in response to your December 4, 2009 letter to the Permittees. This monthly update was requested as Items 3 and 4 and is being provided because the running annual average for carbon tetrachloride remains above 60 parts per billion per volume (ppbv). The information described below will be sent via e-mail and hard copy mailing.

Enclosure A: Electronic spreadsheet of concentration differences for samples collected at location VOC-A and VOC-B from January 05, 2004 through August 11, 2010. This enclosure is provided via e-mail.

Enclosure B: Chart of concentration differences and running annual average for carbon tetrachloride from July 13, 2010 through August 11, 2010.

Enclosure C: A plot of the running annual average concentration for carbon tetrachloride versus date for the preceding 24 months.

Enclosure D: Updated plots associated with Item 1 in the NMED letter.

- Concentration differences between VOC-A and VOC-B
- Running annual average for carbon tetrachloride for January 01, 2005 through August 11, 2010

None of the sample results for the period of July 13, 2010 through August 11, 2010 exceeded the concentration of concern for carbon tetrachloride (630 ppbv). Therefore, additional information normally provided for exceedances previously submitted is not included.

As you are aware, these monthly reports were requested in December 2009 when the threat of exceeding the concentration of concern for carbon tetrachloride was imminent. Since that time, we have taken actions to alleviate this threat, including measures to lower carbon tetrachloride emissions in the repository. We have also submitted a Class 2 Permit Modification Request to increase the carbon tetrachloride concentration of concern, the approval of which resulted in raising the concentration of concern by a factor of 2.5. Based on this information, we believe that submittal of this data on a monthly basis is no longer needed and request that the submittal frequency be changed to quarterly.

Mr. James Bearzi
